## WILLIAM SIDNEY SMITH, ESQ.,

Vice Consul of Mer Britnmic Majesty at Trimidad de Cuba.

Afy Dear Sis:
Accent my fecble acknomededgment of many obligations to you whils enjoying an agreahto residenee in yotr city. The restorative influenens of her delightfel climate I an sutre were much assisted by the pleasure I received from your social friendship.

Very sincerely, yours,
ROBERT W. GIBBES.
Gomumia, S. C., Sept. 1, 1860

## INTRODUOTORY.

A severe illuess from extensive plemisy, terminating in cffusion, having confined me to the house for four months, with very slow improvement of symphoms, I determined in January last to seek the reparative influcnce of a more eymable climate. I laft home feeble, out of breath urom the slightest exertion, and nervous, sufforing at cerery clange, ambl deubtinul of more than temporary imporeanent. Upwh reaching Hapama, the macomfortable feelings wero preatly increased ly the harshacss of cold morthers, and the variable climate of that city, too dung and depressing for worthens constitutions. I was in the sitation of an eminent statesman, who found he was obliged to ark hemself tho question, "where shall I go?" aud haid as much doubt in the reply. Whenever I, on enruiry, suggested any place, there was cither total ignomace of it, or I wats told of some objoction-that thero was no hotel, a very bad one, or exorbitant charges, or insalubrity and privations, rendering the lecality uncomfortable or injurious-sonc difficulty existed in cyery onse, and this $I$ found influenciag many to remain in Havana to securo present comfortable guartars withoat the risk of losing them by a change. In my ombarrassment, I was relieved by the
alvice of alr. ('rawforl, the British ['mosu), who very kindly indemened me of (he value of the elimate of Jrindal de chbat and uged my giviate it a trial.

1 went thro indending to stay a wock ar twa, and fomad it so apreable to wy respiation and combent
 from the day ol my arrisal, and lecling at the end ot that time, that I was well mongh ta travel in olloer parts of the istand. I left Grinidat too cathe and subsecuent experienece satisfied we that it would have been greatly to my alvantage to have remainet thew longer. i found pleasure in visitiug other phares, and enjojed leanty of secmery and sea air, but mowhere dind 1 find the sofbess and dryaess and equability of temperature of I'riatiad.

During the fow weeks I was there, the cflusion ju my chest was removed as T gained strength and vital foree, and my grailude to that swere dimate imbuess we to recommend it to oflers. While alsent I wrote light
 ctlamo, whieh appar to have given pleasure and interest to many frients, on whose urgency I have been induced to puti them in book form. Whaterer fatw was deseribed under momentary inpulse, and had I re-witten the leders, it would lave no dombe been with a Inbored and less attractive sijple. I therefore have simply republished them, with some additional matter, not because f consider them as deserving of more than the ephemeral notice belonging to such composition, but being desirous of giving my inpressions of that
beantiful country, which I know $t$ will be charged with seeing condew de rase, 1 risk the repulitication as a monas of commuacating to a momerous class of invalids any experiemec, which may be of service. If a singlo invalid, intueed to visit Cuba by my adviee, is relieved, is shall be filly reimhursed with the satisfaction of kuowing that I have sontributed to it. Lifo is mot to be valued by money, and heath procurable at any sacrifiee is inportant. A risit to Guba costs monoy, but, as in my ease, the interests of a large family often depend upon such a chauge, and a restoration to health fully repays the outhy. The difficulty of findings a luctlity suitable to the cuse is the chices soure of anxidy in measures for reliof. Dee lievinge that the sonth side of the istand of Gnbat
 invalid, whose nervous power is shatiered and vital forees liminished, I. feel it a professional and social duty to give my viows of its value, based on personal improvement. liationts reguiring at change should avoid the varishle cold weather of the United States, by an carly rebreat to Cuba about the first of November, and shond remain upon the soath side of the island until the first of April. The chilliness of northers being then over, they may safely visit the northern side, and enjoy the beantifil scenery of the trip from Sagua to Matanzas, and revel in the chehanting view of the Yumuri so oxquisitcly elatrming. $A$ return to Havana at that time will allow their visit to be more appreciated, with improved strength, and 1 am sure
they will leave the island with greater watisfinction. For the temperature of Trinidad I refer to the registry of the themomefer, furnished by De. Dirquiola, on p. 67. A comparison of its aletails will give to invalids suffering from afieetions injuriously influeneed by the cold of winter, matel to enemare them in the hope of anelionation of symptoms, if thet fill restomation to health. Theme is, pmbaby, momato presembing sueh attractive interest to them as hath which f have recently enjoget. He who seeks only pleasare in traveling, i lope will find my notes of service, in showing that there is moll to interest him. 'The seientific man will eollect aboudaut material for stady, in the geology and natural history of the country, which will fully repay $\mathrm{l}_{\mathrm{im}}$ for a visit.
R. W. A.

# CUBA FOR INVALIDS. 

## OIIAPTER T.

"Swifty through the foany seat
Shoots our pessel gailinutly ;
Stitl approaching as slof fies
Warmer suns and brighter skius."
Mavana, Thumary 23, 1860.
As "time and tide wat for no man," the passengers by the gool stemmer Isildel at Charleston, were required to bo "all aboard" on Wednesday night, so as to leave before day, and when they turned out, after the sun had risen next morning, they found themselves thitty miles at sea, and steaming along with a steady motion. The sea was calm, consequently the breakfast table full. About 12 m ., we ran into the bay at Saramnal, to receive a few passengers from a tug, and then our ship's course was resumed, keeping between the coast and the Gulf Strean. The weather
becance cold and disagreeable, and confined invalids to the cabin, but twenty-fom hours bronght a change of temperature, aud orereats even wore laid aside, and a delightfil atmosphere enjoyed on deok. No special incident ocentred during the woyse, win extimablo captain knowing the reefs as well ats the wreckers, and we enjoycel the sight of green and blue and purple water, deproiching somefimes within pistol shot of tho reefs. Wo passed fuite near the iron light-house on Chystort rect, where four young halies, laurghters of the keeper, reside with him, where beans marely risit, their acquantanco being linited to a few wreckers, who oecasionnlly give them a call. Robinson Crrsoes situation on his iste, we think, bust have beon fat more desirable than the isolation of these young ladies in their solitary abocie on the oceau. This residence is built of iron frame work, and is firmly pimed inter the coral rock. The posts are slender but strong, and the action of the waves mokes no impression on the bimall surface presented to their fury in a stom.
On Suturday, abont 3 p. me, we entered the harbor of Kcy West, where our captain very

Kindly remained until $9 \mathrm{p} . \mathrm{m}$., to give the citizens the opportmity of enjoying the Campbell Minstrels, led by the genthemanly aud accomplished Fumsey-his trome laing a prom of our ship's company. The reterfion wits no lass to us, as we could not entcr the port of Uawana befme the moning gum from the Morw, and the armanement enabled us to arrire just in due seasom. Upon passing the wew fort, the minstrel band struck up their fine music, and blew their own trumpets to an anxious people. Tho island, Cuyo hucso-the rock of bone (coral?)-is about seven miles long and half a mile wite, while the sothement does not extend much beyond a mile. Here we anw the beantifni cocon-nut tree palden with fruit, some $^{\text {a }}$ of which regated our company with its pleasant milk and rich fonlp,-nlso the tamarind and other tropical fruits. In the unrize state the cocol-nut contains about a pint of agreenble fluid, and the pulp is then so soft, that like cream, it is scraped out and enten with sugar. Most of our ladies took a walk on shore, and saw the comfortable and spacions houses of the citizens, who number now about three thonsaud. On their return to the boat, they brought a profusion of beautiful
flowers, among which were some magnificent roses. The absence of any public velicle prevented our invalits enjoying the visit. The Govemmont fortifications now in progress are very extensive, thought wo leam not sid melz so :is thosse being built at the lortugas, about sixty miles distant. White here onr caterer procured some of the Fing-fish, which is caller the salmon of the South,--resembling, as we think, our fresth water trout, and very fine indeed.
Invalids find good accommodation at a boarding honse here, where, however, there is no great variety of fure, lhut those who enjoy fish and turtlo will find grod entertainment. The latter diet is very suitable for dyspeptics, thoughe not formerly allowed. Nowadays rich animal dict is moro mppreciated than smup maigre.
We loft tho island at 9 p . m ., the minstrols having put the folks all in grool hamor. We inquired whit suceess was had, and wore answered, "by the fall of sume of the benches, a woman hand a log broke, and the people were delighted with the evening's porformance." In our voyage to Key West, we consted within the Gulf Strean, but now had to cross it, and during the night
the vessel roller very considerably. At 7 next monning, the heights of Cuba appened, and at 3 o'clock we saw our signals on the Moro, as we entered the beantiful hay. At the distance of a flew miles, the mumerous white louses look like pateles of show, but as you nent them, you find many of varies colors, of which yellow, blue mod green seom to be favorites.
Tho seene as you enter the hay is enchonting; you can searcely belicye the exquisite pietine is a reality. At the entrance, the rocky Moro lifts its cragry erest of brown stome high above yon, with its gums rendy to blow yon out of the water, or rather into it, if you come with hostife intent; while the Punta stands on the left, with the fort of Principe to assist in exterminating tho daring invader. On the summit of the rock, tho lighthouse is placed, with a revolving light which ean be seen at the distance of twenty-five miles. Tho entranco between tho Moro and Punta costles is about 1.500 yards wide,-its narrowest part about 350 yards. The depth of water is about eight fathoms. From the Moro, the fortifications of the Cabanos extend around the semicircle of the bay to the city, and present a most formidnble appenr-
ance. Looking into the harbor, the tell shipping at the wharees, with their slender masts, contrast with the solid stone buiklings, ach one of which presents the appeazane of a lertification. In tho beantiful harbor, crowich with ships and steamers, prominent are the $S_{p}$ ruish men-of-war, several of which we noticed as sixty and cighty gun ships. They present a handsome appeaance, and show their hundreds of guns, poking their iron mouthe out of the poct-holes, ready for filibusters.
l'ow is poce we neared the city, and our stenimer steadily pressed on through the crowd of ships and boats to her usual anehorme, aud there stopped to receive the visits of the Goverument officers. Tho fivorite Isabel is always welcome to the harbor. First, a small stemuer brought a stern-ristaged man, in hitue frock and gold hoee, who received from the captain a bundle of papers, adter examining which he norlded to him, and ordered his little stemer back to tie shore. Then an individual in citizen's dress, with the most polite gesticulations, sat under the awning of his boat and received nuother bundle of papers, with the passports; he then took his departure, and a
third official now approached and received the mails, after which the steps were opened to the friends of parties on board, rumers of hotels, \&e. Quite a dificienty existen in procuring rooms at the principal hotels, but dinally we suceeeded at the IFotcl Cubumo, kept by Mrs. Brewer, a lady rell known to Fisitors from the States. Some of us who hanl a slight pretension to the Spanish language, were quite mystified at the distribution of a card in linglish:

Num. 80 Sam lynacio Street
mas\% yina.
"In this establishment set as tho European style receives lodgers which will find an splendid assistance so in eating as in habitation, therefore the master count with the elements necessary."

We regretted having engaged lodgings, as being without appetite, we needed "mn splondid assistance in enting," which would have been quito an agrecable acquisition to an invalid.

We were soon surrounded by a crowd of small boats (guadanos) with awniugs, to accommodate folks to go abhore, but a small steamer came
alonggide, to take passengers and trimks, which, after the transhipment, landed us on the Chistom Hone wharf, where we canse into custody of soldiers in seer-suckers, with muskets and sombreros. Onr baggnge was taken into a long room, and every trunk and carpet-lag was opened. The inapection by the oflieers was not very rigid, but enoush to disarrange their eontents, and disturb their smooth packing, if it did not rufle the feelings of the ladies. Javing passed the ordeal, ench surrendered his paspert, and paid $\$ 2$ for a permit for thirty days to remain in "the ever fatithful isle."

Our hotel agent took charge of baggage, and plneed us by twos in the guecr-looking volante, which carried us safely to the hetel. Althought often deseribed before, I wenture to grive you a description of it. Fimey two shalts fifteen fect long, with in pair of wheels six fect in diameter, and a sort of chaise-hody capable of holding there persons at one cud, and a pony monnted by』 grown negro ill gold or silver livery and long jack-boots at the other. The ends of the sharts reach the studlic, and the pony is kept in by loug traces, and two straps over the back. The pos-
tillion or calesero las huge silver spurs and a long whip, which, as soon as you are geated, he pies freely, and awny you go on a canter, soon dropping into a patee or trot. The whecle being high and the body low, with the horse six feet from it, it seems impossible to turn over, and the motion is easy and pleasant. You pay twenty cents to rife to any part of the city, the same for two as for one. The sight of thase long lumbering yehicles, with the queerlydressed negro postillion, is very odd, and their name is logion. The quitrin is a varicty of volunte, laving a movable instead of a fixed top. The cost of theso velieles varies from $\$ 400$ to $\$ 500$, and oven higher, according to the mountings, which are often of silver, and not more plato. Occasiomally you meet a buggy or carriage-some yery handsomebut they aro int numerous.
We were very agreeably surprised to find our fotel fitted up in handsome style, well carpeted, aud with every accommodation of bedsteads and mattresses, while many lave only cots and sacking to eleep upon; and we take plensure in commend. ing the Hotel Cubano as affording crery accommodation to the invalid, by the kind and attentive
hostess. The louses are built of stone, Mexican fashion, with an cuclosed area at the outrance containing a fommin of water. Within the gateway or porte cochere, the only entrance you find, the volante is always kept. As yom wall along the strecte, you sce the volantes in cevery large gate-wny; and it is kept with more care, and certainly mach clewner, than the children of the family. Most of tho honses, cespecially those in which shops are kept, aro of otte stury, and the windows, oxtending to the grombl, ate without glass, and enclosed with long iron rods and bars, slightly projocting, forming a protection, as well as giving the opportimity to look out into the strect. Being low to the ground, as you pass you ean see the fanilies within, usually sitting on rocking-chairs in lines on each side of the window, facing each ather. In the evening the young ladies, dressed up finely, often take station at the grating, and receive the compliments of their friends in passing, many of whon they arrest and bring up to the bar to give an account of themselves. Tho ladies seldom go into the atreets, and never alone, it being considered very indelicate to be without a gentleman-a party of
four or five, howevet, may walk on the Paseo trithout attracting special notice. The Amerienn ladies, though, do as they plense, and wear hats, white the Cuban ladies use only a veil or mantilla over their hemds. Fiwo of the afternoon is the fashionable honr for the emoras and senoritas to turn out in their stylish volantes on the Paseo, and at eight they go to the Plaza de Armas to hear music. Tliey mostly remsin lolling in their yehicics, but sometimes they deign to promenade in the P7aza. The ladies, also, fo all their shopping in their volantes, requiring the elerks to bring out their goods to them.
Our inpressions of the people and city will be contained in our next, ourrente calamo, as an invalid has no time to digest deseriptions and sen-tences-he has enongh to do to try to digest a diet which is new to him.

## CHAP'TER S.

## THE DBEP.

"There's benuty in the deppr-
Whe wave is bher than the why:
And though the light stine bright on high,
Noro sofly do the ear-gems glow,
That aparkle in the deplis below;
The minhow's tinks are only madion
When on the watere they are haid,
And run mad monn most sweetl) shine
Upon the ocean's level brine.
t'here's beauty in the deep."
Tumban, (Cuma,) Jamury 27, 1sfio.
On the arrivnl of the Isaleel, anomg the visitors who came aboard, was Col. Wookt, the Mamager nad Business Jirector of Dhenctiis Trained Monkeys. Ho told us that they wore doing an innmense business, the receipts leing aliout $\$ 1,800$ per day. He is said to have eleared upwards of \$20,000 by this monkey*show. As we rote np in tho volante from the Custom House, and net numbers of these queer vehicles, with the huge negro postillions in fentatic livery, gold and silver
lace, blue and reed jackets, with hat-bands of the same, and large boots with long, luge, silver spurs on, the latter sometimes on baro heels, we could not avoid the idea that Donetti might get Jarge reculits for his show at any them in the street. The ealesero is a machise-his motions are mechanical-and you call to hin to give directions at starting or in motion, he groes aliead heoling the notice, but turning his lead neither to the right or left to give any sign of hearing yon. We met mumbers of negroes in long blne coats, trimuat with red and oher collored facings aud cuffs, with cocked hats and boad bands apon their heads, and these, wo were told, were dressed to attend a fomeral! In every direction some ludicrous object presents itsolf, and really when the bells for church struck up theix tin-panoing, it seemed as if the whole city was a bulesque affair. Had wo arived three weeks carlier wo would have witnessen the amusing and grotesquo cxlibition of el dia de los Reyes, which would have increased the hudicrous iden. On that day (Gth of Jumary) the several tribes of negroes have holiday, and choose their kings-they dress up in every variety of queer and singular cos-
tume and charncter, and parade the strects in the enjoyment of their caurival. Itowever, first impressions are not always the most correct.
The homes, all of stone, with irom hats to the tall windows, and inil-like iooking doors, seem impreguitle fortresses, and impress one in a despotie govermment with the idea of priems being a large part of its polity, even in demestic and social life. These, with the espiomatre of erowds of soldiers with swords and muskef, the every cornor, pastjots for coming or groing, aid posts with camom all aromud, aud the morning and evening guns of the military rulo, give a fair specimen of a military despotism. No native of the island holde the most trivial office, whas any voice in publice affairs-judges and magistrates and ofleers of all kibds, or their families, and eren the troops, wimst be from the ofd enantry.**
Lenruing that the matiomat spert of a buil fight is now only occasiomal, and that the citizens were to be entertnined this afternoon, in company with a friend, we determined to atiend at the Plaza de

* Since this was wrilten, lhe uew Gaplain Gemeral, in a liberal apirit, lans given some mioor omees to Cubans.

Toros. There were about a thousand permons present, though the seats of the circus open abore, could have accommodated ten thousand. Thare were not over half a dozen ladies, and a fow ilttle givels in the crowi. At the sound of a trompet in the upper gallery, the gatcs of the arena are thrown open, ant a butl plunges in and runs around the circle, to all appoatance excited by some means employed before bee enters. Now come a fow mes in circus rider's costume, with colored flags, which they shake at him and run off, the bull sometimes $p^{\text {pursuing the flag, and }}$ occasionally the man-whe then rus to the side of the ring and jumps behind a sort of sentry-box, of which there are a dozen, and he is safe. Two piquoros (pike mon) on miscrablo taekies with blinded cyes, follow the bull around, and with their long pikes endeafor to make him strike at the horses; but of five bulls which we saw, only one could be indneed to gore the poor wretched animal before lim-two or three times he struck at the rider, and came near unhorsing him. The banderilleros (bamer mon) failing to excite the bull, then stick into his neck a parcel of barbed arrows charged with crackers, the explosion of
which is calenlated to curage the worried animal; and when thoy stir lim up to ran after the men and the flags, great ipplause arises from the nudience. If the bull cannot be indured to show fight, as was the ease with several, the crowd jecrs at hime and calls lourlly for him to bo driven ont. But when the has been sufficiently chased by the men with flags, or they linve burnt out all their crackers, tho matador eones in with his long sword, and holding a red flag lefore his face and horns, as the bull nuttempts to pitch at lim, he dexterously thrusts his wenpon into lis neek, and, when striking the spinal marrow, the poor beast falls dend. Out of faur that we saw despatched, the first lungo only killert one, and in several cases there were four or five attempts before the bull fell. As soon as tre fills, a sort of butcher comes in with a lanife, ard gives him the coup de grace in the spinal marrow, and he dies instantly. The aport is shockingly cruel, and one in which the symuntly of the audience ought to be with the wreteled nuimals. The excitement of the bull is purely artificial, offected by goanding, \&e., there being no savage wildness or native ferocity about him, and he seeins nlways watching to get out,
until goaded by the pikes or arrows. As soon as the ball is killed, two mon come in, witl three mules covered with omameuts and bells, and they hitch them to his horns and drag him off at full speed, to make way for another. They usually kill six buils before the crucl entertamment is closed. A gentioman at our hotel informed ws that he onee saw two mon and seven horses killed at one funcion-thoy were hanled out and the en. tertanment continued! The show is becoming less attented, and it is to be Joped will fall into such disrepute as to bo abandened soon. Formerly they had them once a weok, now only oceasionally.
The Volla de Gallos, or public cockpits, are situated in a large enelosure outside the walls. Thicy consist of two amphitheatres, with benches around, a roof overhead, and a circular area in the middle. We however did not attend a cockfight, but for the bencfit of our readers copy a graphic description from Dr. Wurdeman, p. 89.
"To see the cock-pit, one nust devote to it the Sabbath, the chief day for the exhibition. As I passed along the road to it, I met many monnted monteros. Each had his long sword hanging 2
from his side, and a pain-bnsket moder his arm, from which the head and neck of a gmoe-cock protrurled; the sides being gently pressed to his borly, kept his wings closed, and secured him from being jolted by the horse's motion. It was alrendy past twelve, the hour at which the sport commences, and as I passed through the gate, where stoos a man collecting the entrince-money, I saw his table covered by the swords of those who hat entered, the carrying any weapon into the pit being prohibited.
"Surrounding this, standing or seated on the anphithealre of benches, a crowd of whites, mulattoes and blacks were assembled; ail dressed in clem attire, nud intormingled withont distinetion of color. In a box sat three judges, as diguifted as if about to try one of their own species for life or deatl; while on the faces of the rest, cach passiug emotion of the mind was fieely shown. Indeed, nlthongh I hat visited all the hells of Paris-tho gilded and licensed, as well as the obsente cellar in which the lowest did con-gregate--I had nowhere seen the inmost workings of the grmbler's sonl more fully exposed, than in the foatures of these spectators. Fore, the wave
sons of the South conceal none of the excitement the grane produces; it is only modified by the temperament and education of each individual. The native of old Spain, his leart filled with the most perfect contempt of his ereale neiglabors, anid his clignified teme:mor, shows by bis gestures the interest he feets in the scene befiore him. The latter, with no such restrant, expresses his feelings as they rise, in varied gesticulations and vociterations; while Afric's dusky son, perheps but recently bronght out of lis native forests, with all his montaned passions rife within, under the terrible feelings of the gambler, enacts the perfect muniac.
"Iwo birds were brought in, and having been weighed, their owners caried them around, bantering the spectators for bets, and occasionally permitting them to peck at each other. The sight of them, with the sudilenness of ath clectric shock, scemed to rouse the latent passion in each bosom, and the place was immediately filled with tumultuous voices. Clics of offered bets resounded on all sides; 'una once on the black, una once; a shake of the finger from one opposite, and the bet was accepted, without a word laving

- heen exclituged. 'Tres onees por la plata;' 'no! dos onecs,' answers one, who had only two doubloons; 'Tyes onces, mako it up antong your' friends; ant some adding eighths, some quarters, tho sum was completed, and a nod informed the better that his offer was aceepted. 'Cinco posos, cinco pesos por la plater,' 'five dultars on the silver fealiners,' eries a stont black, his body bent over the miling, his eyes protruded, and armextended, shaking his furchinger at each jerson, to find one to aceept his ollor; 'cinco pesos, cinco pesos,' he vociferates, in gestures and motion a perfect madman. Close by his side, amother negro, intent on the same objecet, and anxious lest his rivat shouk monopolizo all the bets, with both fuma extended, atrives for the market by the fore of his voico. (0ppsing binters from the backere of tho other birk, in loud erios, are also heard, and the mingled voices in a continued din striko on tho pained ear. One is surprised how accomits are kept, for no money is ever staked, and no witnesses called. A mul, or a slake of tho finger, is the only pleige giver, yet disputes nover mise nbout it.
"The bets aro now taken, the two birds are
pitted, and all but their ownems retire withont tho enclosure. They commence figlting as soon ns phaced on the ground, and the now silent crowd, with ontstretehed noeks, gaze intently on them. Not a sonnd is heard, but; the bows given by the wings of tho birds; but a lueky grasl from the spur of one sots all voices arain going, and oulds we freely asked and taken. This was repented several times, whenever one seemed to gatin a decided advantage, mitil no donbt remained of the victor. The betters then looked on listlessly, as the trimmplant bird followed closely his dofeated adversary, which, now retretbing, now attempting to ward off the blows, faintly and more faintly returned them, until completely exhausted he sank down, and unresistingly received the contimued attacks of the other until life was extinct. The victor now exulted in loud crowings over the dead bird, but he was not per. mitted long to enjoy his trimmph; for the owner, with his mouth filled with aguardionte, squirted the smarting fluid into lis oyes and throat, and on all his wounds, sucking the whole bleeding head repeatedly. The combat lasted nearly a half hour, for gafitare not used; but no signs of
inpationce werc exlibited, and but little interest was taken in the fite of the bieds themselves, independent of that of the bets comnected with theirs."

At present the Rumsey Troupe of Minstrels, and the Monkey Show, are dividing with the Grame Opera and Thentre the attention of the Havancros. There is also a large Circus Company here, for whom were hrought over in the Tsabel some thirtecn horses, the remains of Yankec Robinson, who was sold out it Charleston. The cost of bringing a lorse from Charleston to Havana is $\$ 40$, and the duty $\$ 50$, thongh for breeding purposes they are passerl free.

For two days the raw and disagrecable sorther has made us very uncomfortalide, and, accompanied by showers, hats confinod us to the hatel. Upon inquiry as to a pleasant retreat in the country, we find that the hotel of San Antorio has been abandowed, and that at Guines is a miserable affair, kept by a molatto, and totally unfit for invalids. Unless provided witl letters to private gentlemen in the country, the invalid lias no chance of any comfort, or even to find a place to stop at. By the adrice of a friend we deter-
mined to try the climate of the south side of the island-a longer way of than usually is risitedthat of Irinidud, where there is said to be a soft, pure air, and pleasant teuporature, and where northers are never lelt, and a goot hotel is kept.

At 6 next morning, wo found the rail cars ready to start, a long train, and very much crowded. Our roud bruched off at San Fielipe, and at 10 a. m., we arrived at Batabano, a shipping port, on the bay of Tros, some fifty miles from Inama. The country we passel through seened mostly of vegetable gavelens, though we saw groves of cocon nuts, and fields of pithe apples, with quantities of a species of palmetto. The stately palm towered above all, and seemed to shew an aristocratic influence of protection, seattered as it was over the fields.
"Its feathery tufts like plimage rare;
Its stem so high, so slrango, so fair."
In some places there were groves of them, which are much valued, both on acconnt of the wood for building, and the bark below the leaves for thatching-most of the ferm houses being covered by it. The fruit, or nuts, called
palmiche, is used for feerling logs, and is quite an important article in that relation; a kind of cablage is found at the top of the tree, which is boiled and much relished.

At Batalano we entered a fine liurge steamer callerd Rapide, which goes to Cienfuegos and Trinidad, arriving at the former at iniduight, and the latter next day to dimer. We had a cool stateroom, the bottow of the berths being of open straw, and a blanket the adjunct. A large company of Spaniards and Creoles occupied the npper saloon deck with us, und a considerable sprinkling of Los Yanghecs, who are found everywhere. Treakfast was served at $10 \frac{1}{2}$ a. m., and consisted of' a very great varicty of meats-beef, mutton, veal, ham, chickens, and fish of varions sorts, cooked in many disgrises-and vegetables too numerons to mention. Iou could get along very well if you conld find ont what yon were eating. Breaded mutton chops minde of pork--a very successful imitation-were very good, and rice was properly cooked. Decanters of Catalan wine, or Spanisl cluret, were aluodant, and Barsac, or Sauterne, at your call withont extra charge, and eafoffuerte was handed roind after the eloth was
removed. The Catalan wine has more body, is a stronger wine thou French claret, and is usually drank diluted with an equal part of water. It is less liable to become acid, aud agrees better with dyspeptics. It is miversally drank in the island, and you moet with it every where. While at table, gentlemen lighted their segars, and were polite in offering them to strangers. Two of otu ladies got into conversation with a Spanish youth who spoke English, and asking him some gucs* tions about cigaretton, he presented a paper of them to one, aurl refused to receive it again-such loing a custom here, and it is considered ill manners to refise any thing offercel.
We steaned along the southem const in sight of land during, the whole voyage, and enjoyed a delightful gentie breeze, very soft and refreshing, after the ugly nortlier at Iavana. The light peagreen of the water was very beautiful, and the loose, distinct clouds floating in the trausparent sky, gave us pleasant ideas of a tropical region. .
"It is a goodly sight to see
What Heaven has dane for this delichous land
What fruits of fragranco blush on every tree!
What goodly prospects o'er the hills expand!"

There was a company of soldiers on bourdyellow fellows, with seer-suckers and sombreros, and marked ly red cloth epaulets. Whey were lying at case in the forward part of the lower deck, among negroes and fighting cocks and horses. At a long table some wero playing mente, for small sums, with women, initating the company in the upper saloon, where publicly the dons were putting down donbloons on the cards, and looking as cool and inperturbalile when losing as when winuing. Anong the employes on board were several coolies, who secm to be used for every purpose, and are active and infelligent. There being no stewardess, the ladies hat a coolic boy as fille do chambre, who seemed to know his dutics. Dimer was similar to preakfast, only more so--mecho-fuerto-lauge dishes of weat and fish, and vegetables in abundance. After dimer, the dessert consisted of preserves, guava, dec, cheese, a sort of pudding, and a varicty of nuts; after which cups were placed at each plate, and waiters---one with hot cafe-fuerte, the other with hot milk-followed each other, to give you the proportion as you preferred it. 'len is caried up to the saloon at 9 p. m., lout it is a miserable
atterpt. During the moming, pitchers of mangeatle, from swert oranges, aud horce, a sort of heer and water miximere, sweetuct, are phaced on the tabie for gencral use.

Our slember lamied at Cicafucgos, at 1 a. m., on 'Thurstay, but wo remained on boart. On Friday, after a pleasaut run alongside the mombtains of Trimilal, from Cienforgos to Trinidad, we reached the latter place at $3 \frac{1}{2} \mathrm{p} . \mathrm{m}$., having found a car at Casilda, its port, realy to receive us, from whence a rite of three miles brought us to the city, the deanest we have seen in Cuba. lt is built on the sicle of the womtan, and beartifully situated.

## OHAP'TER 111.

"To reginns where, in apite of sill nad wac, Tracea of Filen are atill socu below; Where mountain, river, forest, ficld and grove, Remint hiln of his Maker's power and love."

Tumbat, Jamary 29, 1860.
Cienfugos is the most regulatyly built city in Cuba, being laid out at right angles. It is situated on the liny of Jagua, "the finest jert in tho world," as the Cubans may, having an aren of fifty-six miles, and a very narrow but deep entrauce, of course protected by a fort, Jos Angeles. The city has about six thonsand inlabitunts, a school, a theatre, and a newspaper. It has wide streets, and nbout one thonemd honses. The climato is very salubrious, and there is what is callell a good hotel. It is quite a trading place, nad here we met several moro $L$ Los $Y$ anghees, looking after sugar and molasses. It is about two hundrod and twenty miles from Travana. Our steamer remained several hours, enabling passengers to visit the city.

A young lady from Philadelphia came in our steaner, to become ar governess at an ingenio, or sugar phantation, of Mr, IL., about sixteen miles off. Ife was quite delighteed to meet her, but liik countenance fell when ho saw her hage trunk. He saicl, if there were two smaller once, he could cary them oun a horse, like paniers, as they do everything here; but one large heavy trunk coukl not bo disposed of, as it would require a barrel of sugar to balance it, and this would be too heavy a load for a horse. After some diffienlty, however, he fonnol a schomer going within a short distance of his ingenio, nud som we noticed the trunk on a pile of sugu hogrineals on route. Travelers in Chba, who expect to leawo tho railroad routes, should have auch packnges na can bo disposed of on horseback, as that is the common mode of traveling. Mr. H., with true Spanish politeness, invited us to visit him, but his estate was too much out of tho way, and we returned to the Rupido, for Trinidad, where we arrived to dimer at $5 \mathrm{p} . \mathrm{m}$.

We havo a finc hotel, in usual style, with quadrangular open area, aud marble floors-tho chanbers have simila floors, and the cota have
sncking and no mottresses. The house is adt mirably situated, overlooking the grand pheaza de armats, which is smoothly paved, and filled with enelosures af iron malines, conlaning tho most beantifnl fowers. Roses are abumdant and in fall blom, and the banam tree loaded with froit. Cocom-nints and palms, and a litge raricty of benutitul treppical plants, are to nes nowd and athactive. On Thurstay and Smoday evenings, the leneinental Jind, of seventy performers, disconrses delightiful masie to the senoras and senoritas, who favor the plaza with their presence. They phay soveral pieces from some fine opern-last night, from Traviata-then a waltz and a conntly dance, the latter grandly stiming, with the full band, and close with :t grand march, and retire. In all the principal eities and towns of Cubn, this musical soiree is a public iustitution; at Mavana, they are held evory evening, anuse the people, and stimulate the bunds to perfect themselves in diflicult pieces. Nothing is more refreshing than to sit in the cool phaza and imjoy

[^0]lnvalids bear exposure to the solt night breeze with littie risk of taking eold. We saw no one with a cold while at Jrinitarl.

Quite near us is the cathedral, whence the everlasting bells are constantly pealing forth. Day-dawn is ashered in with a sort of Pourth of July rapidity of chime, which awakens all new comers in the neighborhoud, and overy now and then they barst ont with vehemence and beat firionsly. This morning they poured forth so long and rapidly, that at 6 o'clock we walked out into our piazza, and found $\Omega$ constant succession of females, while and watk, going to mating. They all woat shawls and veils, or mantillas, with which the bommetless head is eovered-the laties every variety of lace, and the bataks whatever they cim get. Amont the passers were the young girls of a convent sehool, in white, hoopless, with white mantillas, and those of an ordinary school, in every variety of costume, some very rich, ind most of them with fashionable crinoline. On their return they passed through the plaza, fund the sight of the little girls, with richly valiegated shawls, among the flowers, was vory striking, At eight we went to
the Cothedral, and there found a large crowd of laclies, with few men, but many black females, at mass. The devont behation of the congregation, the xich tones of the orgath, with the oceasional intermission for the promest, and the chant following, woro wey inpussive When the service was concluded, the ladies cane ont, most of them followed by a boy or girl, with their mat and chair, which are always carried to the chureh, there being no seats on the marble floor. In this Cnthedral is a picture of Christ waring the cross-which is truly fiac.
Trinidad is a beantiful city, built on the side near the base of Mount Vijia- forming guite an amphitheatre. It contains sixtecn thonsand inhabitants, and two dhousand five lumdred honses-built in the b:me style as those of IIavan-of stone, with bow windows, protected by iron rods and bars, though we obscred many with the grating of woot. Glass windows are searcely known even in the cities. Tho romens are 10 to 20 feet high, and full of large doors and windows, while tho floors are of marble or tiles.
In 1852, the number of doaths was only

354, while there were $83 t$ births, and 79 marringes. It is a very liealthy place, no doubt owing much to its great cleantiness, though seldom swept but by mins, and its slope preventing any accumblation of water. Tjon inquiry, we lean that the yellow fever in Smmer is rare and slight. The atmosplere is soft and balmy, and rey grateful to lumg that have been oppressed by the cold air of the North. The air ia so genial and pleasant, and the temperaturo moderate, that we are surprised at there leing so few invalids licre. 'The lotel keepers in Mavama are interested in preventing it, by informing risitors that Lavana is a fair specimen of tho climate of Cubr, which is a mistake. About three years ago, there were many from our Northern States.

The only house kept lere is capable of being made a fine one, but at present there is no femalo chamber-maid in it, and the fare is not as well cooked as we would desirc, but considered very fine for Cuba. To-day we dined weli on lanb and green jens. One, however, ean get egga and rice, bread and potatoes, and will find green peas, corn, fricd plantains, salaify and many 3
other catable vagetables--the meats are usually too highly seasomed, and cooked with Spanish oil; and when you rise you have cafe sin leche, pure; but at breakfast yon tave cufc an lait, which is always grool; after dimer it is given without milk. Firied phatains are very nice, and dure may heakfast on them freelylhey are very tike our sweet potatoe when so cooked. fimit is delightefirl, and oranges, bamanas, guanavana, mamelies and cocos-muts abuulant; as yet we lave seen no ofters. The city, is badly supplied with water, though they have it raised by an engine, but most of it is brought in jugs from the country, four of two gailous cach on horseback, at about a cent a gallou; while fine springs of cool water are abundant in tho mountians within a mile, neding only pipes and a reservoir to supply it abundantly. Tho prople of Chba, however, are inert and destitute of enterprise-caring for nothing but making money and spending it. The water however (limestone) is very good.

We seo lere, as in Havana, immense moving masbes of green com fodder, stalk and blades, in the street, looking like a stack in motion; upon
nearing them, however, you discover a pony's head stieking ont in front, and find him londed with some 250 or 300 pomads, of what supplics daily ford to all tho horses and mules in tho city-Mfrofoju-which is dealt out in bundes by the Arafogor Versetallas and comery produce, fruit and suma-caue, and even heof and meats and coal, are brought on borses in pmuicrs-so heavily loadiug the poor ereatures that they walk as if foumbered in the fore-legs; in addition to the heary load, a big megro summonting it.
By the kind aid of Whi. Sidney Sinith, Esq., British Vice Consul, so well known from his sympathy with the ill-fited Loper party, we visited the magnificent residenee of old Mr . Baker, who, a natire of Pliladelphia,* lina lived sixty yours lere. It is a most elegant establishment, built in the usnal style of Spmish houses, marble and mahogany being the chiof materinals
*Sir John Becker, caecllentissimo, has minco died. In consequence of comstant infitigement on his estates by his neighbors, he purehased a title from the Spanish Govermment, which gave him the privilege of transferring to Spain any litigation which ho had, whers his chances of redress were better than in his location. Ifo laves some $\$ 1,000,000$ worth of property to be contested for ho two sets of chidren.
in its construction. The apartments are numerous ame elerantly finished, many of the best workmen from Eurone and the United States having twen employed on it. The drawingroom and ande-roon tre paved in mosaie, of pieces the size of a ten cent piece, which oceupied six years in polishing down to the proper level. Even the open aren is paved with marble, as well as the jiazait aroumb it, in the second story. The house is elegantly furnished, aud cost ste0,000, but like the buildings gemerally, is filthy in the extreme, and looks as if it had not been cleaned in many years. It is moumfinl to see such neglect-lut these peoplo have great ideas of buikling fine houses, mud whon built, they are left to hake care of themselves. They are as inert as they can be, and the servants are much worse. As wo entered the porte cochere, or vertibule, we met some of the small children, in their usual costume, a pair of red sloes, and nothing clse. Ono of them, about three years old, camo up nad shook hands with my friend, and walked up stairs and took the hand of a grown sister, conversing with th, who seemed to consider him all right, and this in a magnificent

## fllotograpins.

establishment of one of the richest men in the islaud! In the streets, at every turn, you meet mases with ehilalra in similan costme. Water is consiclered dangerous in this elimate, hence children are seldom washed, and ladies use a towel with aguardiente to rub their faces and neeks with. If you ask in the conntry for a basin of wher to wash your hands, they bring it warm, and with it a bottle of aguardiente, which is very cheap, costing about five enats.

We have in our hotel a distinguished photographist from New Yolk, who has an elegant establishment in Broadway. Ile says tho dificulties between the North and Sunth have affected every branch of business so much, that lee has been forced to como to Cuba for something to do. He made a hacky lit in taking the Captain General and lis beautiful lady, and he is "going alead" furiously. He has a room in Havana, another here, and has just sent two of his men to open one at Cienfuegos. He has five artists finishing up his pictures at this place, and subjects are coming in rapidly. Colored photographs have never been taken here before, and the population being a rich one, our friend will
draw a crowl, and while drawing them ont, will draw in the onces, which are abmuntant among tho wealthy ereoles. We dropped in to-day at his room and fomet han taking the newly arived Govemor of this department, who was in full rig. The pictures of life size are very finc, but would be to nis delurnonsy dear at ten ounces.

The oflicials have leen "considorathly exercised," in the hase few days, at a reported victory of tho $\mathrm{S}_{\text {pmish a }}$ aruy orer the Moors, at Tetuan, and as they tike every opportmaty of magnifying the prowess of their great and invincible Government, the Govemor authorized $n$ brilliant demonatration at the theatre, last evening, in honor of the victory. Everybody had to go to show loyalty, hence the house was crowded. The Keller Troupe entertained the company with their anjerb tableaux vivants, and being close by, wo ventured to look in upon Columbus Janding in Cuba, hut the crowded house and densely sufficating smoke of segars gave us but littlo tine io do mere than notice the magnifieent dresses of the senoras and senoritas, beyond anything we have seen elsewhere. The lustrous eyes, exquisitely penciled cye-brows in the
beautiful forcheads, and the well formed lusta, are very matked in the Spmish ladies. Their complexions ate olive without any tinge of redtheir statarre fine models, anil thair hair jet black and expuisitely haxurimet, but we saw no really beautiful women anong them. In the last act, when the athack upon tho Moors was signalized, there were lifty solkiers on the stiare, besides tho acting troupe, and we learn that the checring was immense, in proportion to the greatness of the achievement of Spanish valor. It is well the celebration took place before the full accounts of the battlo are receivel, as it is probnble the success of the Spanish army is only in the Gorernment paper.

A subscription has just been started in support of the war, headed by the Captain General with $\$ 4,000$, of his salary of $\$ 50,000$. Ilis pickings, however, will soon make it up. If rumor be true that Conclin received an ounce (\$17) for cach negro landed last year, that alone yiclded $\$ 680,000$.

Everyborly is required to subscribe, as appears by the following circular issued by the Governor

- of Matamzas, a copy of which wo accidentally procured:
"I'slitical Administration and Presidency of the Council and Committes for Subscriptiona and Mans for the W'tr in Africa.
"Jemamtanta of Matinzza:
"The illustrions Conneil or this city, aud Comnitter for Sulseriptions and Means for the War in Afrim, estallished in this city ly decree of the Suprome Goverument of the Island, have directed themselves to you, through me, with the sweet confidence that is inspired by a loyal and enlightened people, who has never failed to show its patriotic ardor and its enthusiamm for all that is noble and worthy.
"The Spanish Nation, to whom you belong, descenderl of the same race of men who twice, by their resistance to the advance of the Moslem, have proved the bulwark of civilization and of cluistinuity in Europe, emhraced with the sacred desire of maintaining that honor, which aniunated it amidst the smoking rutios of Zangossa and those of Sagrintus two thousand years before-
fird of which the love burns brighty in tho bosom of its sons-has cmbataced forsently the vecasion to offer to her Mujestys Government resoures to prosecute the war waged agninst the empire of Morecco to obtain the relress of repeated insults to the mational honor.
"Inbalitants of Matamas, the citizens of the capital of this rieh and fertile Antilla, have chublously come forwarl with fuarls to second the nolle impulse, the generous and ardent patrotism of our hethren in the Peninsula, and certainly you will not be the last to fullow this glorions example, thus giving positivo proof of your apirit of mationality and of tho nrdent desire fou have, of contributiag your sharo of the expenses of the boody struggle already commenced by our valiant army, which, under the gridance of experienced and renowned chiefs, must obtain the triumph inseparable of all great and just causes.

## Signed,

"The Governor, President of the Comeil.
PEDRO ESTEVAN.
"Matanzas, 23d of January, 1860."

This nddress, with an accompenying printed circular, is forwarded to every imhabitunt personally; tixing the amount of sulageription equal to the yearly tax paid by cacth one, with as much moro added as the ardent patriotism or each may suggest. The amount of the positive proof, in rold and silver, with any remarks one wishes to make, is written in the margin of the circular, which is to be retumen, thas proventing mistakes which otherwiso might oecur. Mostly do we admire the forethought with which, fearing the Cuhnos might possibly, in their ator for their mother-land, be tempted to ruin themselves, the sagacious Comnoil has kiarlly fixed the anount of their subscription. Please, gemtlemen, walk up to the Captain's oflice and settle!

Ficslas aro frequent; three days of the last week having been celcbrated in honor of some saint. We attended one at a neat little chapel, on a hill, approached by a hundred feet of termaces. On cach side of the way were seats of masonry, filled witl tho crowd of ladies mostly. Two priests passed, with long segars in their mouthe, and we followed to the door of the
church, as it was filled. The altar was beautifully illuminated with hundrecls of candles, and soon the priests eommenced a elant; after overy fow sentences, the tine orchestral band struck up, aut phayed lons pieces of exguisite musie, oce:tsionally assisted by the voices of mathy boys. The chief service was this fine music, execpting that whenever it ceaserl, the three bells were rung with great vehemence. As the service was elosed, the band strinck np a lively tune, very like a country dance, and the people retired, amidst the firing of crackers and fire-works. Next day was another holiday, and the tongues of the lells were in motion all day.

In reply to an enquiry of a Cuban friend, as to the name of this chapel, he writes:
"The name of the 'church' is Nuestra Senora de la Candelaria de la Popa!' 'Popa' signifies stern, and as Nuestra Senora, \&ec., is located on such a commanding position in the rear of the town, you will perceive that it is by no means inappropriately named. Of course you are aware that we have a Saint for every day in the
calendnr, nud qometimes half-n-(lozen; at Lavana, they have instituted two new ones, which are unknown elsewhere. In the eluurch of St. Augustine there are two Virgin Marys, one is white, the other is of at mulatto color. At Regra, the Madoma is black-once a year the latter is carriced in state through the town, attended by the Aelminal and atl the oflicers of the flect, when is platest minder hee especial protection. Her last appecatuce was extromely grand; she wore a tunic of very rich silver brocade, frimmed with white ostrich feathers, her train was of crimson velvet, edged with gold lace, whilst her brow was enriched by a magnificent tiara of pearls and diamonds, which produced a very brilliant effect as they glistened in the sin: the tout ensenble would have been really elegant, but for her crinoline, which had been so carclessly put on as to cause poople to make remarksl Amidst the roar of eannon from the Spanish ships-of-war, at auchor in tho harbor, the eulivening stains of military music, and attended by the elite of the city, with an escort of half a regiment of soldicrs, her black Saint-
ship was promenaded througl the streets of tho city, which were strewn with branches of palm leares, of flowers, and filled with thonsands of kneoling devoters, dressed in their gayest app:are!"

Cock-fights iwe here as popular as in Ifarana, aull as trequent.

## cilapter IV.

"The lireath of arean wameres thro their vales,
In moving treewes now in reessing gates.
Earth from bure lap permaial wodure pours
Ambrosial frisita nom amarubline fowers
Over wihl mountains and lnxuriant plains,
Natare in all the pronf, of teanty raigus."
'Lanimab be Cum, Febramy 4, 1800 .
The country around Trinidad presents as beautiful seenery as can be fomm on the island. Less than a mile from the rity, is the combtrysent, or quinta, or Schor Justo Chatero, one of the wellthicst citizens, who owns sugar entates, ingenios, and minch property in tho city. His excellont lady is widely known for her extensive charities to the poor. We procured a volante for a ride before breakfist, and visited thin picturebquo residence. The entrance is through an immenso iron gate, and tho avenue is lined with the stately palm and alime, alternating. The house is a modification of a city
louse-a sort of cottacfe ornee, with a large veramia in front. At Ilio back, the whole extent to the river, some sixty or seventy yards, is covered by inturnse bambons, planted at the sirles and mocting aloove, which, with their leaves, shade the surfues, whewe a table remaing, at whel 380 persons reerontly dined with tho Captain Genemal. Ilve house is hamsomely furnislued, and one of the rooms-fitted up for the Condesa Serano, tho beatifid wife of the Captain Gomeral - hams flae ominental irtificial roses still all over ils walls. Soveral well-exeented oil pantings, of tho proproctors ingeriose, aro hanging in the parter, with it molber of benutiful colored engravings in other reoms and out in the veranda. The garden is filled with every variety of trec of the islant-the inmenso ceyba, the beautiful mango, filled with small fruit, the almond tree, lignom viteo, with quantities of cocotmuts, patms and oranges. The rich banana and the fragrant pine apple attract your notice, with flowers of every reseription in full bloom. At a short distauce from the honse, a small river runs, of water as clear ns erystal,
about four feet deep, and you deseend to it by stone steps from the bathing-honse on the bankthe whote shadert by the immense bumboon, prerionsly noticed. So cool and icaightfal a retreat from the sum has advantages and attractions in this climate that render it a most gratoful refuge. The garden is in lond order, and seems not to be as properly cenced for as it should be, and the roses and phants are destroyod most extensively by a large red ant, (bibt agua, when we saw in myriads. The orange treas ate also suffering seriously from the xavages of an insect which is runing thom. Among the trees, we were slown that which produces the forlitedon fruit, Toronga, and had fine specimens of the fruit, which is not much valued, though when fresh it is juicy and pleasant. Beautiful walks among the various groves, are ornamented with jets d'caut and fomtains, haudsomely arranged, and shell grottoes are met in the densely shaded shrubbery.

[^1]Having amusod onrselves sufficiontly in this fine reteat, we chterd the rolate and drove about two miles to the quinta of a brother of Senor Catero. Here we found anothor pretty place, with hathing-houso and stream, and groves of fine trees and flowers in bloom. The Senora very kindly showed us around, and when about to leave, she sent her son with two large goblets to a cow tied not far off, and he filled them in our presence with fresh milk, which he promptily presenten, smoking and founing. IIaving bid adios and mil gavias, we resumed our whicle and returned to the city, in time for breakfave at the usuall hour of $10 \frac{1}{4}$ a. m .

We did not mention the enstom in IIavana and other cities of driving the cow around to serve constomers with puro milk taken from her at their cloors. It strikes strangers very oddly to see it in the streets.

We walk usually before breakfast and after dimer, and lie about the marblo halls during the day, reading, writing, and enjoying bananas and orauges, with the sweet breeze, which is seldom absent. The chmate disposes to siestas, which
come in generally about 1 o'clock, as dimer is nut ready intil 5 o'clock.

Ballou, in a Cuban reverie, says:
"Dhere semes to be, at times, a stange narcotic influence in the aturosplere of the islaud, nore especially inlam, where the visitor is partially or wholly removed from the winds that usatally blow from the Gulf in the after part of the day. So polent has the writer folt this jnfluence, that at first it was suppesed to be the eflect of some powerful $\mathrm{p}^{\text {dait }}$ that might abound upon the phatations; but careful ownimy satis. fied him that this dremmy sommolonee, this delighthal sense of ease amd indelent luxuriance of feeling, was solely attributable to the natural effect of the soft climate of Cuthe. By gently yielding to this influence, one seems to dream while waking; and while the sense of hearing is diminished, that of the olfactories appears to be increased, and ploasurable odors float mpon every passing zephyr. Onc foels at peaco with all mature, and a sense of voluptions casc overspreats the body."
This afternoon, we walked to the eemetery,
which is now a neat grave yard, within brick ank phasiored watls, with gato a pretty little chapel for migious servecs. The onclosure is partly oceupicel with yaults, about seven fect by five, ten fect deep, and coresed by a heavy marblo slab, with rings, with the mame of the owner upon it. They are very close together, and in them coflins are piaced, one upon another. The remainder of the gard is used for graves of those who cambot athord a vault. Poolics are Turied about fluce fect neep, and usually wiftout a collin. Jhary are allowed to remain mine months, when the bonces aro taken up to make way for othors, and are thrown inform chelusure in : comer-a sort of Gogethe-which we saw filled with stinlts and bones. The cometery was much neglecterl, and a miscrable place, matil the worthy English Consul, W. Sidney Smith, Fsic, took up the work of refomation, and by his. influence induest some altention to the care of the dead, and to him is due the clapel and the enclosiing brick wall. The space being necessarily limited, however, and no burials allowed elscwhere, the disgusting practice of removing the bones is constantly recurired.

We have been moch struck with the number of blind persons wo moet in the strect, and find that inflammation of the oyes runs its course very rapilly in this elimate. The practice of painting the houses yellow, blue and green is snid to have arisen from the mpleasant effect of the glare from white, which is now atways avoided. The chrious varicty of colors often seen on a house, makes a very ofld appearance, while it is, however, very picturesque. Some of the strects havo fine trees along the side-walks, but, it is not general, as it should be in such a climate.
in a first-rato steamer, with good state-rooms, and a very fair table. Tou leavo by the railroad on Wednesday morning, at six o'clock, and reneh Batabano at ten, whero you cmbark in the tino steamer Rapido, formerly mn East River packet. Next day at $3 \mathrm{p} . \mathrm{m}$. Your reach Trimidad. Tho city is benutifully situated on the side of a mountain, and seldon without a delightfinl breeze. The temperature is equable, and varies from $73^{\circ}$ to $80^{\circ}$. An ongineer on the railroad here gave me the following record: December 8 , $78^{\circ}$; December 4, $73^{\circ}$; December $10,78^{\circ}$; December $11,70^{\circ}$; December $18,67^{\circ}$-the coldest day this winter. The sen is in front and the mountains in the rear of the city-the slope being nearly 400 feet to the iea; hence you have either a monntain air or the ses breeze, which is soft and genial, bearing on its bosom a delicious languor, which we sappose is the dolce far niente of the poet. Its soothing influence. upon an iritable system does more than medicine, becarse its medication is combined with lightress of atmosphere, containing a reduced amount of oxygen for the combustion which weare aut life in such cases.

The Frotaidsla Grande Antilla, theroniy ono here, is now, since the 1 be inst., in the batinds of Mons. Bernard, who had the reputation of keoping one of the finest honses in Havana. He has a cook of great celebrity, nud the table is excollently served nud nittended. There are some privations in the house to Northern halits, but the host scems very desirous to lave everything arranged to the satisfaction of his guests.
Trinidad is the cleanest city we have seen, being paved, and waslied by every rain. It is entirely free from dust, and is remarkably quiet, except that the bells of the cathedral ayd churches remind one constantly of their services. On two evenings of the week, the military band plays, in the plazas, delightful music from the best operas; and there is always some amusement or other at the theatre for those who can enjoy them. Country seats or sugar plantations in the neighborhood may be visited, and the beautiful vagetation of the island seen to great advantage. To those who profer tho engeriniet of the country, an opportunity exists for accourmodation at a quinta, two miles from town, which has just been rented to Mr. Cascelles for
a houso fir visitors. It is in a beautiful neighborluond, and has the luxury of a fine batl?-house. On the whole, we know no more desirable a place for invalide to pass the cold monthe; and finding great benefit and pleasuro in its gentlo breeze and agrevable temperature, we cordially recommend it to mur friends who may vigit Cuba.
Having been deeply impreased with to equa: bility and mild temperature of Trinidad, we rought anxionsly for recorded information of its thermometricul character, and were fortunate in mecting an old class-mate who pursued his medical bludies in Philadelphia, and has for thinty yexre leen a resident practitonar in Trinidad. He rery kindly lias furnished the follow: ing most valuable memorandum, supplying the desideratum:

## A SUMMARY

Of the Metcorological observations pade at Trinidad of Cubi, lat. n. $21^{\circ} 42^{\prime} 30^{\prime \prime}$; long. w. of Greenwich, $80^{\circ} 2^{\prime} 30^{\circ}$; about threo miles from the coast, at a beight, over the levol of the cea, betreen 180 and 800 foer.

Thermametripal obpervations, twe dajly at apont empo-
rise, and at half-past two o'clock, p. m. A series of 13 years.
Berometrical observations, two daily, at abont sanrise, and at len o'clock, a. m. A series of 7 years.
The observations of the fall of rain are of a series of 11 yeara.
The cbservations of windy, rainy days, and days of thunder, a series of 13 years.

CUBA FOR INVATIDS.

Thininat, April 10th, 1860.

This record is particularly vathable for invalids, showing both equability of temperature ant uniformity of atmosphere in dryness during the montlis most adapted for their resintence here. Tho salubsity of Trinidad, as a winter resideneo, is comparable with that of any climate in the world.
Dr. Finliy, of Javana, gives the mean tomperature of the hottest mouthe, July and August, as $80^{\circ}$ to $83^{\circ}$.

As a contrast to tho summary of the temperatrie of Trinidad, we give the following from the last (seventecntin) Registration Report of Massaelusetts as the temperature of Boston, as a Northem climate.

Molical unen and invalids can make their own deductions from the data here given, as to the importance of chango of residence in may discases from a Northern climate, so cold and
mhospitable to focble lungs and shattered nervous systems.

Table exlibiting the Mcan Temperature of the Air in Guston, in poriuls of ten yars, during the last Thirty-five years; by Robert Treat P'aine, Esq., of Boston:

## CILAPTER VI.

"I could a tale menfol, whoso lightest word
Would havenw up thy soul!"
Trindad de Cuba, February 11, 1860.
We have said much of the deliehtetul air and temperature of this phace-the jrure, soft, fresh air from the sea, which we have alhost constantlythe thermometer varying from $73^{\circ}$ to $50^{\circ}$. Dr. Urquiola, a physician of high character, whose registry of the themometer is given, informed us that the coldest day, in thinty years' experionce, was in 1842, when once the thermometer stood at $50^{\circ}$. The nighte now are cool, and thick conts are needed in only morning for comfort. The invalid who comes here will bo repaid in breath, if tho fare is uot so agreeable. There are, however, all our vegetables, and many others, and thoy are present at all times. It is a great fish market; yet, strange to say, no one but licensed fishermen are allowed to fish-the poor,
who conld live mpon fish, are not allowed to catel them, ard is single indivirluad bought from Government the nomopoly of the market at ITa-vana-Ine roquiting all licensed fishermen to bring every thing they eateh to him. Jlis is a protective tarifl, the anost odiens wo ever heard of.

The incessant tolling and finging of bells reminct us of the constantocenpation of the priests. Night hefore lasi, we heard the sound of masie appronelsing from a diskance, and leaming that it, Was the procosion of the Thest, wo went to see it. If being for a watthy colored person, somo handrer megres, ench with a glass lantem, it donble file and open order, marelied along the strect, and at the rear of the procession was a volante, condaining the padre, followed by a band of music. The lad been to administer the last sacred rite of tho "Oleo," to a dying man, and was retuming to the church. As the procession passes, every one in the strect kneels, and every house-keeper at night puts a lighted candle at leer doot. Just, as we are writing, six strokes of the cathechal belt, twice repeated, amounce the departure of the 5
dead from this life-for a femato five is the allotted number.

Wo have Ieard many stories of robberies and murders on the islam, which are less frecquent than formerly, though in Mavana and its neighborhood there is danger in being ont late at night ant alowe. $A$ fricud has favored us with the transation of the confession of a robber, a few years siuce, which was given to lim by tho priest who attended him. It has nover been publishet before, and is so fearful a record of crine that wo think it worth recording:
"Coneessifon of a Cuban Robrer.--In the year --, Francis Xavier Lazo, aged 23, was consigned to the criminal ward of the Hespital Sam Jnan de Dios, in Tlavana, to recoive surgical aid for a severe monket shot wound in the shoulder. $\Lambda$ fee mights atter his arrival in the Jompital, he was supposed to bo dying, and a pricst was hastily summonel, to abminister the 'Olfo,' according to the rites of the Roman Gatholic Churel ; but on feeling tho prisoner's pulse, tho priest declared that the man was under the influence of some uarcotic, and proper vemedies being used by a
physician, the priest's opiniou was fully confirmed. On removing Lazo to another bed, a Jetter, addressed to the Gaptain General, was foum under his pillow, writen just previous to his taking the dose of landanum, with which he had intesided to kill himsolt. Jt may bo doubted if the amuls of erime beat record of greater atrocities hawing been committed by any single individual hatu those confessed by Lazo in the following paper:
"To This Wrethony the Coptain Gicneral.
"Gire: Being on the print of death, I desire to make known for sour Execlloney the guilty acts which I have commitfed in this ishand, in order 1, hat the individuats now in prison, under suspicion of beiug the authors of these critres perpetrated by myself, may not sulfer unjustly, and also that by making a full confession of my misdecds, 1 may bo somewhat relieved of the load of sin which oppresses my soul:
"Ist. I was imprisonod in the city of Cuba for a robbery committerl in the town of Buaymo, where I stole some articles of great value, for which I was comfined in a cell, from whence I made my escapo to Pucrto Principe, where, in
oompany with a colored mon maned, foapuin, $I$. broke into a jewelers store, and carried away and cutice case of jowely. Tt was taken from me, on the rond to las liunas, by a Commissary of Police, from whom I mate my casape, hat soon afterwated retmpod and robled the samo police oftere. In Samedi Repiritu, 1 commifted a simitar robbery of jowely, ime the same night boke into twor other stores.
" $T$ then went fo Trinidal, and broke into tho
 worth of jewelry and jroperty. I was arrested upon suspicion, but mado uny cseape, leaving in the hands of the authorities a trunk of elothes and a pass, which 1 obtamed from the alcalelo of Sancti Espixitu, under the assamed mame of Prudeusio Belet. In Mratanzas, I robbed several houses, from one of which $T$ took an immense anomit of jewelry, but being pursued, I throw the greater part :way, behind the jail. I suceceded in escipinst but som retmond to that city, where I perpotrated many atrocitios. In the vilage of Guanagos, 1 broke into the homse of a Viseaino, from whom I took a large sum of money and other effects.
"In the villagre of Guanabitcon, I committed ereat exeesses, and fist mmong the number $T$ killed at man on the hill eallod 'Aompuine' I also killed a Oommissary of Police bamed Mat tines, and a Thent. do Thmeo. Jn the eity of Thavan, in Andrade street, I murdered a police oficer manced Mambormith wife. I had been sonnetine contemphang this orime, inasmach as that ALarato was the moat enerretic police offeer in the service of the Govermment, and the one who hat beof mone active in his pursuit of me; but as le lived in an une sery, it was diflicult to got at him; lowover, I natiled mysold of a frighliful thmalerstorm, with wimd amel rain, and with a ladder and instuments for foreing the windows, at midnight, I proceeded to the residence of Maranto and soon accomplisted my purpose. I killed lime that his wite as they lay in bed. The same night and in the sane street, I killed an old man; mod the next mowing, I went to look at the boly, as if lay stretehed ont at the gete of the jail for recomition. A day or two after, eaty in the moming, I killed a Frenchman in Campanillin strect, outside the walls of the city. Near to the factory, (row the

Mospital Militar, and also in the vicinity of the Barracoms, 1 have perpetrated great atrocities of the above nature.
"Nen Mitawas, towards dimk, at a place calted Ojo de Aqua, I met a man, from whom I took a watch and a large sum of money, and then murderest fim. On the roal to Ta Mocha, I met a genteman and lady, whom I urdered to stop; the gentlem made a more as if abouts to draw a pisiol; but before lie lial time to use it, 1 shot him dend with my musket. Thraged tho body into the mash; and after forcing the lady, I killed her also, to prevent discovery. I then fled from Matanzas, as a large reward was offered by the authorities, to take me dead or alive.
"I then went to San Antomio, where 1 perpetrated varions excesses. Retmuing again to Havana, I broke iuto the house of the Captain of Artillery, Don Jose Solear, and carried off a large sum of money. I remained sometime in Havana, robbing, anong others, the thonse of the merchant Vias. Compelled agrin to fly from IIavana, I proceeded to Guamajas, where I was captured by the oflicer of the district, who cansed wo to be tightly bound witlo cords, and
with an cscort of fourteen men sent me to Mavana; but at a stopping place on the way, I managed to get my lands loose, and seizing a machete, belonging to the chicf of my guards, mado an attempt to escape. I was betly pursned by severat of my eaptoss, whe of whom had sererely wounded we by a musket shot in the shoulder, and fimeting myself abont to fall from loss of blood, I tumed round to mect my pursuers, killing the first one that came ul, the chice, with his own sworl. I was, however, soon overpowered and conveged to this city; where I an now lying at the point of death, having swatlowed a dose of laudanme.
"My strongth is rupidly failing, and I have given your Excellency but an incomplete statement of the dreadful crintes which now so heavily weigh upon my soul. As well as I can remenber, I have murdered, during my shameful carcer of sin and wiclechess, upwards of twentythree innocent people, whose blood crics out to Uearen against me.
"FIRANOISCO XAVIER LAZO.
"Hospital of San Juan de Dios."

This miscrable wreteh recorered from the effects of the poison he lad taken, and was publiely executed in front of the P'unta Castlo, acknowledging, in his last moments, thent his death was but a poor atmenement for the lives of the mufortunte rietims who had fallen into his murderous himds.

## mitarper vit.

"Aud there sle liay without e'en a sliroud, hud stangers were around the collinless;
Not a kinsman was secn amoug the crowd, Not an cje to weep, nor a lip to bless."

Trunnab we Ceba, Tebruary 13, 1860.
In our last letter from IItwam, we mentioned seeing a large nomber of negros, dressed in fancy conts, cooked hats, \&e., for a funcral. Wo have since fond that they were the hired mourners, funished ly the molertaker, who has on hand constantly a large stock of such livery, to supply any amount of demaud. In proportion to the weath, dignity and standing of citizens, is the number of such attendants, the expenses of a burial being enormons. Tere in Trinidad an old gentleman, in moderate circumstances, recently lost his wife-the expenses of the funeral were $\$ 700$. We saw a burial of an old lady, who had ouce owned a sugar estate, and was connected with some of the best families, but was now
poor'; she was taken to the cemetery by four negroes, and from the cofln was thrown into the grave, three feet deep, and the cuth piled upon her. No service was hekd, amel no persons attended, because she was poor! Sucd is life!

On yesterday, was Migh Mass in the Cathedral; after which was a sobemn Te Doum, in honor of the Qucen's accouchentonl. Two priests received the Governor and suite at the door, spribkling the way with holy trater. The Governor was attended by his slaff; all the offeers of the regiment in uniform, tho corporation, custom house officials, postmaster and other Govermant officers. Upon their entering, the ladies moved their mats and chairs, to make way for them, and they arranged themselves in lino at the sides of the church. Each was then furnished with a wax cancle, three or four feet long, which they held lighted during tho whole service. Five priests, in rich restments, approached the altar and commenced the service, alternating their chants with the music of the band. The organ was not used, but a large band of fine performers on many instruments played a number of the cloicest pieces from the best
operas. The music was very grand, and lasted about an hour.

In busincess matters, there secms to be no difference between Sundays and other days-the stores are all ojen, and things are lawked abont the streets as during the wock. Sunday is the Ereat diay for amsemem---hult-fights and cockfights, and balls being given on that day. laassing by the 'Cheatre, last exening, on returning from a walk, an inmonse crowd induced an inquiry as to the canse of it, when we fomb that there was a "dignity bell" of colored folks going on. A mour standing at the door had just communicated the infomation that the house was full, and no more cond be admitted. At these balls, the colored ladies vio with their betters, thongh not recognizing them as such, and dress in the extreme of fashion. The colored gents have equal pretensions, and their style of dress is a prominent feature in the picture.

It appens that the Govermment, which is alive to taxes in every form, jssued an order to the "cullud pussons" to have two balls and a grand mascuerale, the profits to be applied to the fund for the war against the Monrs. One dollar is the
ontruce fen, and as there is no strper provideronly the cost of the Theatre ant musis the batance, from such ant immense crowd, hust bo something consideral) The acting (iovernor and suite attended, and remained mitil 1 a. m., pronenating and enjoying the seene, while tho dank laties and gentlemen went theromgh the varions dances. We net, fodlay, a friend who was present, ath he reports that the aftili was well conducted, with proper beharior on all sides.

Quite a commotion hats been exeited ly the bew Govemor having ordered the ammal Diester of the river $\Lambda y$ to be enppressed this year. It is a great occasion, and is a sort of camival on the banks of the river, a few miles off. Fverybody goes, and the preparations and expenditures are on a grand seale. It lasts four days, and daneing, enarl playing and all sorts of amsements prevail; they then move of to another river, and the same gayety is repeated all through the district. A new Governor, who has only been two months here, was induced to bolieve, by some old lady whose son had just lost henvily by gambling, that it would do mucls to put down that yice, so he recommended to the new Captain General the
suppression of the festiml, ant ho approved it, and there has been great dissetisfaction; but in this (ioverment there is no redress. A few days sinee an ofler came fansfering the Governor to Puerto Primepe, and the Governor of that city is to eome here; weanwhile, the Colonel of the regiment, who is lomm tenems, gives dignity bath, that he may strut his hre" oflecial existence as conspicuonsly as possible.
To keep the hall in motion, the Government paper at Javalaz gives notice of' a grand "fundion tarrich," or "twll-fight entertamment," orrered for Sunday, the 10th, at which tho Condesa Sun Automio, the larly of the Captain Gencral, and ofher senoras and senoritas, will be present. Their boxes will be sphendidly lined with magrificent silks and satins, and adomed with artificial flowers, ©e. The bulls have been named Tangior, Bullones, Tetuan, Sertallo, Renegado, Wonte Negros and Macrucos, and will bo clegantly adomed. The denth of these poor animats, with such names, by the sword, is to be a prefiguring of what the Moorish towns will receive from the attacks of Spanish valor. Before the acts of slayiug the bulls, there will bo
a grand hyonot fencing mateh ly soldiers, and no tonbt there will be an immense concourse of the fashionaldes to enjoy these gentle sports.

The stemer Water Witeh, one of our Government vessels crusing alter stavers, is here. By invitation of her courtcous Captain, Sartori, we went on boncl to visit the oficers. She is the smallest craft in our havy, and her complement of men, including offieers, is sixty-six. She caries three Dahigren brass pieces, which no donbt will prove grood speaking-trumpets to the slavers, if ever they can see them .-but, like the metyets, or fleas, yon know they are there, but it is hard to put your finger on then. The vessel is rery neat and clean, and everything in fine order, and the officers a capital set of gentlemen. They await the arrival of the wrablote to be relicved, and win then go to Pensacola to refit.*
*The activity of our entisers in theso waters is catuse of great uncasiness to the slave traders, who hame been completely deccived in their calculations. They were led to belione that the arrival of American ernisers to replace the "British" was the most fuvorable thing that eould happen to them; that the crptitin of nin Aneriean man-of war would on no accoment captere a vessel hoisting the American flag, and in fhet that the arrival of the United Slates ships was altogether a froce! This explains

The ladies of our party were delighted with the risit; and enjoyod a most satisfactory lunch of erool things in American style. The neat littlo cabin was a mery place on tho occasion. Wo engoged the fine cool breese of the harbor, the beautiful trameparency of the watere allowing us to seo slouls of inhes at a depth of fifteen fectand the various styles of shipping, among which was a Spanish war steaner, with the broad pennant of a Yice Admixal, on a ton of inspection. At 2 p . m ., como in sight the gool steamer Tapido, which to-momow makes ns bidadien to Trinident. She eomes but onee a week from IInvana, and a gool opportunity oecurs, with a pteasant party, of crossing the island, which we propose to embrace.

[^2]The salubrious air, mild and equable temperature and quiet of Trinidal, with refteming music, have done much to restore lireath amb vital foress to our enfedted body, and we shall ever remember it with gratitute to the All-wise Crealor, who hats blessect us with roturning lealdh. We feel strong chough to bear the joumery, and the change to the berth side of the ishlark, and tomorrow we go to. Cienfuegros, to take the raileoat for Sagua la Grande. Until we reach that port, actios.
valley, and tho seenery varied and romantic. Tou pass through ocenso of eane, with the grand palms seattered through the: fields, looking like great sentincls graveling tho rich poesessions below them.
By special invitation, through the kindhess of a friend, we started with him to make a risit to the estate of Don Miguel Cantero, abort twelvo mites offi, in the valley. There homes in aut volate, buder tho guitlance of an experiencent calescro, whase shore jacked and longe sworl ave him quite the appename of prepartion for business in entting down any roblecrs who uight attempt to stop, his homes, famed ond equipage. We were accompabied, atse, by two bosemen; one from Jhiladelpha, the other from Si. John's, N. B., who fomd that it required the constant aid of their spurs to keep their ponies up with ouss, althongh with the leary volante. We went at full tilt, jerking over rough rouls and hills, as if we were endeavoring to esenpe pursuit, and in an hour and a half were received at the quinta by the senor with the aff:hility and easo which charactorizes the Cuban gentleman. Fortunately, he spoke our languge fluently, and we
were alik the better fo enjoy his hospitality, which was dizpensed araterindy. A prime ohject ot one visit was to sex ant examber a minemal spring on the estate, which we thand on the bank of the chamange river, minering its sulpharetted strem with the limpid currat of the hater-one ielentified with the sports of the peophe, whieh a now Governor, ienormb of their importance, has despotically invarled and set aside. J'lo water of the spung is aboudant, ant strongly impregnated with sulphemetred lybleten ame rabonice aceid, resembling mach the water of the White Sulphar Spriner, in Virginit. At some future day its modicina viotues will make it a popular resort, and the beantiful (sstate on which it is will be an aturactive aud desirabise phece for invalicls. Its occasional use in cbronic skin diseases has caused its virtues to be approciated in its immediato neighborhoor, but it descrves a wider celebrity.*

At 10 a. m., aftor visiting tho gromeds, we enjoyed a most luxwrious beakfast, combining American and spanish cookery in its varions dishes, whose profision was conongh for five times
the umbine of our small paty. Our agreeable host then suggested a visit to a large catato or
 ortered fresh horses. Oum vohicte being properly appointel, and our ontriders also accommodaten, with the addition of our lind entertainer on a rapid paeer, we started for tho new destination. After coursing the hills and valloys, for such was the speed, we arriver in an hour and ten minutes, with no farther adventure than that oue of the hursenem, in erwsing ativer, got into a hole, where his horse stuek fast, mutil he jumper off, when the animal managed to get ont. He got off withont further lamage, execpt to his suit of white linen, which suffered most extensively firon the anomt of und meesssarily disturbed on the oecasion.

The ingenio of Guinca is the property of Senor Don fusto Cantero, a gentleman whose name is identificd with progress among a slow and inct race of people, who are afraid of enterprise and excrtion, as if they were principles of destruction. Senor Cantero has imported from France, at an expense of at least $\$ 100,000$, the wachinery necessary for refining sugar, and has
introluced into this part of the island the only relimey here. Wo went firmongh the various rooms, and waw the compleated and elatorate metns: of ataining the elesired end, and followed the process through its detalis to tho fine sugar in boxes, realy tor export. S'pon entering ane of the roons, we beran to fix our tongue to muster up the little Spanish we possessed, to comverse with a dark Spaish-looking, black-bearded individual, who soemed to hatve charge. Upont bowing to the selop, we were quite astomishat at hiss "Hlow are ye, ductur?" Upon empuiting how he had attained the knowledge of our dignified profession in that out-of the-way region, he said, "I saw you in company with the officers of the Water Witch, going to Casilda, and heard them call yon doctor, so I enquired about you; please to givo my respects to Mr. R., when you return home to Columbia."
Let a Yankee alone for making discoveries wherever ho is. Here was a New Bedford cooper, who with his wife were residing on an ingenio, twenty miles fron Trinidad, yet picking up quickly the knowledge of visitors to the latter place on an occasional visit. Our party called on
his lady, who was delighted to wee folks that conld speak her language, laving only her pawe to do so in a limited way, during the absence of her companion in his baily work. She had resided here two yums wilhont leaving the estate, and regretted our moth staying the might to have a long talls.

During the last week B, (000 joms of sugar were turned out, and the yield of the season is estimated at 5,000 boxes, worth 840 eath, or $\$ 200,000$. Molasses aml Muscovarlo sugar made from it, pay ila expenses of tho estate. On this estate are 340 negroes, of which number aboont 200 go into the field. The amount of land in sugar cultivation is about cight acres to the land, and the produce is as aloove stated. Now negroes are selling realily at *o00 to $\$ 1,000$ apiece, and the demand very groat, which kecps up the arival constantly of cargoes, notwib, standing the cruisers. When we visit, the north side of the island, we will dicseribe the coursc of proceedings on a sugar plantation more in detail.

## sUdPlide spleLNG.

> At the Quinta of Migul Contoro. Irinidad Vellemy, Bankes of the Ay.

Mating no eonveniences for the andysis of this water, we cond only deecte frm ont familiarity with the Springs of Virginia that the surply of sulphuretted hytrogen and cabonice aeid was very large-of the former atmost as much, and of the latter finly as moch as in the water of Whito Sulphur Springs, Grcenbriar County, Virginia. A botite of the water was submitted to Messrs. Booth, Garrett \& licese, Aualytical Chemists, Philatelphia, from whom the following Ietter was received:

## Philadilehin, Jume 29, 1860.

Dear Sir: Wo have mado a carcful qualitative amalysis of the bottle of water which you left with us on the $22 d$ inst.

The total solid matter per gallon is equal to 59.73 grains, and consists of muriates, carbonates and sulphates of lime and magnesia, with a small quantity of silex. We also examined closely for iodine, but were unable to prove its presence-
the water still retainot a slight odor of sulphuretted hydrogen. Tho principal ingredient is mariate of thme, which constitutes pertaps one-thiad of the whole solirl matter. Carbonite of lime Was also prosent in large proportion, biept in solation by free carbonic acid.

Yours respectfully,
BOOTIS, GARPEJT' \& TBESE.
Dr. R. W. Gumbs, Gommbin, S. O.

The Smphar Sypung alluded to, is einnated on the westem hank of the $A y$, at Sr. N. Cantero's quinta, about 12 miles from trinidad. The water springs ont from the side of the bank, and during freshets is covered by the river's strean. It could very easily be dammed, though most likely other springs more favombly sitnated can be found on the eslate.

The presence of mariate of lime in much larger proportion than in any of the Virginia mineral springs, inereases the value of this water in scrofulons and ghandular affections, as well as in skin diseases and those of the liver, and we believe it will be found highly therapentic.

The spring is in a xegion of secondary blue dinestone, resombling very much that in which most of the Yirsinia mineral waters are fomed. We see no reason why these waters should not eome into nse in the winter, as well as our own White Sulphur water in the summer, seasol.

## gimPTER 1 X .

"Dhe travele itcighteth in the riew
Of change amb choice of sumbley limblat creabmos,
To mark the habits anel to note the lene
of fir-bour people, and their stmetry natures,
Their shapes, their speed, their gat, their featolles."

> En Rongh to Simina ma Granm, February 1sth, 1800.

The Coosios, ©0.In 1847, the Spmishe Government issued an order allowing the inportation of 2,000 Chincse Coolies to supply labor in this island, as tu experiment; subsequently they allowed 2,000 more, and then removed any restriction als to mumber. The demand for tabor is great, and the increase of negroes on tho phantations amounts to mothing, in consequence of the great disproportion of the sexes, the women, on many plantations, not amombing to one-fourth of the murber of slayes. Tho introduction of Coolics has operated very injurionsly in relation to this increase, as none but males have been
browelt, and, where they are empluged on the plantations, their having money is a great soure of comuphat. The Goolies aro sold by their im-
 then for eisht yous, paying to ench in addition St per montr.

Thero is a mant for Coolies at the (ImRro, near Havana, which is open to visitors, lut wo did not visit it. They are used for all purposes. They are a spristlily, active and semmingly industrious people, wey wheh in their intellisenee ant motions like unm multethes. All can rearl and write. Threy make good meelnomics, amel are used as firemon on locomotives, brakesmen on cars, clivers of ox carts, water carriers, sorvants on board of the steamers, in Mavana as waters, and, also, as general laborers. As soon as they are out of their time they have the privileges of the whites, and you meet them riding in onnibuses, *e. They are docile, but many of thom become discontented; and if $s 0$, or if whipperl, they often commit suicite, having no regard for lifo.

One moming, when leaving Trinidad in the cars for a visit to the port Casilda, we saw
several men enrying a coolic across the yard at the depot, mind uon incluiry, found that he had taken poisom. Ne ran nway, a few days before, and on that morning was fomed in the ear, near ome of the stations, insersible. A the cup with by him, contaning something whele he had taken; and the commissiry of police bronglat it to the car, when we cexmined and fown it opinm and aguadionte, enough io kill hatl a dozen. The plysician of the railead whe seat for to administer to him, but upen returning from Casilda, four hours alter, we hat the curiosity to go into the hospital, and fomed lim dying. Mo diod at 4 w'elock, and was taken to the cemetery at 6 , two hou's after! Tn the hospital wero some twenty others sick with varions complaints. They are much encrated by tho climate, and being very slowly acelimatizod, many die. The number who commit suicide is very large, and within a week we heard of two cases in 'Irmidat. The policy of the Government in allowing their introduction is a bad one, as in aldition to the corrupting influence on tho plantations, their intercourse with the lower class of Creoles will
raise a population, with all the rights of the whites, that in the future will give troulle."

The Spansh Goverment, while eomiving at
 pation ly its law. liwey necero owned is remistered, and a prico athixem for taxes; at this pries, if the neerro is dissatissfied, ho can require his mation to sell ham, if he can find any one willing to buy him; on if ho can ane sto to pay down, the can buy his frecolem by installments, which the owner is obliteel to receive. $\Lambda$ mother can, by paying soln, bey an mborn child at any time, ame the mastere is ohbiged to sulmit to it. Such cases oceur in tho towns and citics, but on the phatations the begroes are ignorant, and, withou commancating with those who have a knowledge of the daws, they fnow little of them.

When a slaver is captured by a Spanish vessel, the negroes are called cmancipados, and are sold, like the Coolies, for a term of years, and a great many become free in this way-the number of

* Sinee this was written the Cophain General lins issued an order of the Covermment, that the inportation of Coolies slall cease at the close of this year.
free negroes on the istand being very larere, a lizy, worliless set. Fou meet them in cruwts at every tum, and how they live is a mystery, The emancipados aro said to bo mot as well treated as slaves, as their emplogers lemo no intereat in them boyond the term of service parchased. The demand for habo on the phatations is very great, and women being much wated, sell for the same price as men, and very reatily. Iattorly, the importations have fimished more lemales than fomenty. The native bom negro, or Croole, is considered as fir more yamable than the imported African.
$\Lambda$ recent correspondent of the N. Y. Herald writes as follows:
"lhe local councils of tho varions districts are about preparing reports in relation to the wata of Coba for adilitional labor, in order to keep even with our vastly increasing product. Memorials, with ample specifications, illustrating the coudition of ond general as well as agricultural interests, will be forwarded to the Government, at Madrid, for the royal determination as to the continued free introduction of voluntary emi-
grants from China, Inlian Islanks, Polynesian latauds (the stratight haired negroes), or the coasts of l"weatan, moter contracts for defined periots of serviec-might was, more or less. The Goolie system, and dis clasia of introduction, closes with the persunt rear, mecombine to the last royal edict upon the sulbect; and wo bemonstrane or exeuse will be allowed for its contimance. IIowever, as now 'handas' aro lo be proposed for their Gopermment, move leniency in treatmem, a slight athame in compansation, and sucial safety protected agamst deotundand herease of the chassbegome the demand far lathor and lion seentity of the while fopplatim, having two antagonistie servile dasses in thein midnt-it is powsible that an extension muy be granted for several years Jonger. We alrody thegin to see itle and worthless (hinese in our streels in too large numbers for the safety of properly. In TTavama and suhurbs, at this time, we havo between 38,000 and 39,000 freo negroes or colored; abont 37,000 slaves, ard 93,000 to 98,000 white persons-ail told, nearly 169,000 . The Chinese, ocenpied int the industry of the city, or residing liere from termination or release from contract, are not as yet
included in tho consus. The proportions, as ther are, are not very pleasant to slecp upon; and the only snfety we have, is the siromg Governmenti which keeps ath colows and shates in ordor."

The arrival at; our hotel of several men known to be enguged in the trade, induces the helief that a cargo is at hand, and will soom be landed. They are ennstantly arriving, and the facilities on $a$ wide extent of const are such that, with proper precautions, they can escape the war wessels. Gver 40,000 were lander last year.

## CHAPTER X.

"Pair mature! thee, in all thy varied ehamens,
finis would I chasp forever in my arms!
Thine are the sweets that never, hever sate?
Thine stild remain through all whe stoms of fate!
Congia, tie Porev of Sagu la Grande, February $23,1860$.
No traveler has ever donc, in one day, what our little party did yesterday-crossed the island of Cuba from the south to the north side. The railroad from Sagu: to Las Ornces las been finished for some woeks, though a broken bridge has prevented the trains runuing over until now. We understood at Irrindad that on to-day the road conncetion with that to Cienfuegos would be celebratex, and the rond opened to-momow; so we proposed, instead of returning to Havana to go to Matauzas, to cross the island by the new rond.

We left Trinidad at 8 a. m., in the fine steamer Rapido, and had a pleasaut run near the shore to
the noble bay of Jagua, already moticed. The entranco is decp, but wery harow, covered by a strong and yusty-looking fort, of umplastered brick. Wo reached Oienfuegos at 1 p. m., and found agrand dricuma going on during the celebration. Crowls lat come over from Sagua, and tho entertamment was a magnificent one, given by a citizen of Cienfucgos. A harge hatl was filled with fashionables, ant the bereak fast room arjoining had an imuense table spread with haxures, and omanenterl with bramids of artificial flowers. The band in the ara was poring forth its melorly, while the eompany was engoying the feast. Wo looked in upon the affair, and found :un old friend present, and then proceeded to the hotel. Here we fomb the information of "no rooms," and upon inguiry learned that the festive party woule retmon to Sagua at $3 \mathrm{p} . \mathrm{m}$., and were politoly invited to acompany it. Though the chances of lodging were as bad in Sagna, where there is no hotel, we determined that we could not be worso off, so we took the car.

The company was rather merry, and champagne hat pot the senors into a somerrhat bois-
terous lumor, but we got through safely. The row runs theneng a fine, hilly country, full of sugar atates, Thi, ther visiting the valley of Trinidarl, the kenory was not wery attractive. We passed the great estatio of La Sonta Susama, which was said to have belonged to the Dowager Queen ol Span betore it was sold to the Ilavama Company, which now owns it. They paid $\$ 2,500,000$ les it, and make ammally 6,000 logshends of sugat. Who machincry cost over

The drain arven at Sagna al 9 p. no, and here it appeated that the bissopp of Lavama had arived to consecrate hio new Cathedral, and the people were to lave a three days' ficsta. Not a cot was to bo procmrel, and no accommedation whatever cond be fomed for our party' of four. The American Vice-Consul very pulitely offered to give up his cot for one night, but that would not have accommodated all, so we, fortunately having a locomotive builder in our party, who knew the engineer, he persmaded him to take us in the tender to Concha, the port of Sagua, at the mouth of the river, twolve miles off, where there is a hotel. For the first time to three of the four
(ono a lady), we rode upon tronks and logs of wood in the tender, over the ronghest roal we ever experienced, where the passenger cars daily run off the track-the enginc, however, being heavy, rarely gets off. After severe jolting and jerking, and $n$ threat of stean giving out, we reached the depot, within a mile of our hotel, about 12 p . m . Here we left trunks matil morning, and, with carpet bays, took up our warch over a paseo, or platfom of boards, abont four feet wide, uphen piles, and after a rensomable time we got to the end of the bridge and our trials of the day--being the first party that ever made the trip from Trinidad neross the islund in one day.

Our hotel is built on piles, some rishance ont in the water, to be near the steamers wharf, and presents the strangest lookiug settlement we have ever seen. The waters aromel are as clem as erystal, and we are surromided by thonsands of fishes swimming in every direction. In early mom, or after sum-down, the sardines are seen skipping in all directions. The bay is frll of brige and schooners, awaiting the arrival of hogsheads of sugar from the estates, and New

York and Platadelphia emptains are abundant, and our only fisitors. They bring out staves, loop-poles and burel heads, which are put together on the plantations or at the warehouses; and the estimate is, that it reçures $30,000,000$ of stares to supply this island alone.

Alongside of our house is a pen or corral of green turtle, which we suggested to our host was a welemene sight, hatying seen none on the south side. He said his Conlie did not muderstand cooking them. One of our party, Mr. N., of Philardelphia, medertook to instruct him, and after careful dissection of a fine fat fellow, he gave us the first dinner of turtio steaks and soup since landing on tho island. Spanish cooking abounds in garlic, onions and highly-flavored Spanish oil, and saffron is largely used to color the soup and other dishes. Our theo days dotention at Comcha has given our Chimaman cook instruction in broiling beef-steaks, fryiug fisl and making turtle soup, and we trust future $A$ merican visitors will be bencfitted by his colueation, as these Coolies are very apt leamers. This oue has been five years in the country-loug enough to get over the disposition to suicide. He turns up his nose
at turtle, hut the no doni)t would smack his lips at a fat kilten or athmp rat. During the last two weoks, two Conlies in this place have houg themselves-one of them, bectuse sonse one owing him five dollars went off withont paying him. We find, whererer we go, that thoy are remarked for their vicions tondencies- frumkenness, smoking ojinm, staling, \&c.; a miscrable population of a shori-sighted Gurermment.

As there was mo attraction in Sagna, which is a poor phace, wo hat no desire to attend the consecration of the Chtledral, to see the elebration by cook-fighting and playing monte. One of our party went up, and reported the state of things as very demoralizing. The fiesta lasts three days, and during this tinue cock-fighting, lotteries, raftes, and all sorts of strect exhibitions, are going on. Some hundred tables wore in the strects, at which senoras and senors were sporting the onees at monte or loto. At night, the Italian Opera was crowded to excess, and Miss Eliza Heron and her sister, from Pluiladelphia-calling themselves the Sisters Natalie-are the popular celebritics entertaining the citizens of Sagua.
The harbor of the port of Sagua (Concha) is
full of American bargues and brigs, awaiting cargoes of sugar the crop being very hackward this year. With one of the Captains, we took a sail in his enter to some of the Cayos or keys, in search of corals and shells; hat found a poor beach and the mangrove so thick that landing was dillicalt, and wo were not paid for our trouble by the few sponges and shells we found. On the way, we were ammsed at the huge minwieldy pelicans, flapping down into the water in all directions, tano enough to be shot with a pistol. Quantities of fine fish are taken in the seine by the sailoms, among which the large P'argo and Red Grouper are comppichons.

The arrival of the litele stemmer Sagua, on Wednecday, was the signal of our departure from the boka, and wo bid adien to Concha, Senor Lairo, onr quiet, good-tempered and humorous host, and the sand-flics.
The desire to see somewhat of the interior of Cubn, induced our crossing the islaud, though wilh the pospect of difleulty and personal discomiort, instead of retuming to ILavana immediately. Tho Saguea is a small, flat-bottomed irom steancr, drawing about five fect water, and
adapted to the perilons navigation among the koys, which are numerons on the eoast. The first man who took a steamer through those Cayos must have been a fellow of infinite daring, as the narrow channcls and ahort turns we experienced, were enough to keter another experiment of seeing the fine secnery, and baving a sight of flamingoes and sea birls. Offen our boat stuck for a time, and poles and backing, with oceasionally a wapp on the mangrove of the opposite side, were necessary to our extrication.
Tho water was beatifully tromeparent, and the bottom visible while among the keys. In many places the chamel was searcoly twenty feet wide; however, we got through safely, with only an hour or two lost, instead of four or five days, as sometimes lappens, and arrived at Cardenas to dimer. We have but little to say of this city, which is by no means conspicuous, except for mosquitoes and dleas. A very comfortable hotel is kept here by an Figlish lady, but the place is low and hot, and presents no iuducements for invalids to remain. There are sugar estates around, which are desirable residences.

We have mentioned the filthiness of the houses
of the Chbans- the steamer presented a shocking specinen of the lind. Senors and horses, pigs and negroes, Sparawds and Coolics were hudded on hoard- in the laulies' cabin with them dirty negro women, with filtly children, were allowed the freedorn of the berths-and in the gentlemen's cabin, twenty four by twenty, were twentysix berths, all oceupied. The heat was excessive, tobacco smoke exuberant, and the jabbering of semors preventive of slecp. A fat priest, in a high humor, aucl a most disgrsting commissary of night police firm Matanzas, kept up buch an incessant disenssion to a very late hour, that no one could close his eyes, and when it ended, the latter commencel at snore on such a key that he must have practiced it before, to keep his deputies awake. The night was passed most disa-greeably-the only one so since we landed on the island.

In the morning, after breakfast, the table was oceupied as usual with monte, and gold was abundant. During the excitement of the game, a quarrel arose, which several attcmpted to quiet, but ineffectually-the disgusting snorer (a government official) was one of tho parties, and
getting very much excited, he slapped the face of the other, and was in turn slapped sevecely by a friend of the latiers. The row seemed likely to become general, when the wife of one of them sereamed and threw herseff into the crowd, and the interference of geulemen stopped the affar. It is expectecl that boor will be poured ont as well as goth, and this is often the result of these gambling sprecs in this viciots comentry.
The trip arong the keys is very interesting onee, and we appreciate it the more when safely orer. The sea breeze is delightefnt, and the navigation swooth-the danger being of grounding in places where no assistance can be had.

We were all pleased to reach Cardenas, where we are now done with smatl steamers. Onr next start is for Matamzas, and then for Invana by railroad, where the steamer for New Orleans will take us from a comntry, delightiul for its climate to the Northem invalid, its beanty of secenery for the tourist, and its richuess in production for its owncrs, but which stands sadly in need of a good governuent.

How fancy revels in your lovelier thmains!

> Ingem-Ga Amabne, near Matanzab, Folmy $27,1860$.

Curdenas was sutherl in 1827, and has grown up into a lage city of ten thousand inhabitants. It has a fine bay, but is situated on low, flat gromnd, which makes it hot and remackably productive of musfuitocs. So far as wide streets are concernod, wide pavements and fine, handsome stores, it is the first city in Cuba, in our experience. The phaza is a fine one, the mariket the best we have seen, and the Cathedral in front of it quite imposing. The people lave the reputation of more enterprise than in any other city on the islanil. A very good hotel is kept by Mrs. Woodbury, and you find English mugh spoken. The railroad to Bemba runs through a
beautiful country, filled with sugar estates, passing through immense fiedts of sugar cane, and hundreds of acres of plantains, which are the bread of the country, the main foorl of the negroes,* though potatoes are also much deponded upon. Decasionally you see corn fields, but the corn generally is not finc. Bemba is a poor-looking place, scarcely worthy of being called a town, but its neighluorhood presents benutiful scenery and rich ingenios. Here the roads branch, one going to LIavana, the other to Matanzas--on the latter, the Colisco Rond, we went to Matanzas, and found comfortable quarters at the Ensor House.
Matanzas is a fine city of 26,000 inhabitauts, and its magnificent bay gives it many advantages to the mumerons vessels always there. The ofd and new towns are separated by the fiver San Juan, spamned by solid and massive bridges, and its banks are protectod by masomy, giving it the appearance of a wide canal. On a smaller scale,

* Ir a quaint old account of the lame travels of D. Tugram in 1568, in the Gulf of Mexico, he says:
"There is a Trec called a lolanten, whita fruite growinge on yt like a pudlinge, wel, is most excelent meate Rawe."

Matanzas somewhat resembles Naples, in its location on the bay. Matanzas being mainly settled by citizens from the Uniterl States, our langrage is moro common there than in any other Ouban city, and the custons of tho place are more Amoricanized. Many of the oldest residents are from the statos. Fino equipages in New Fork style, witl servants in livery with top boots, and fast trotters, in singlo and double buggies, sport in the paseo overy evening. VoTantes, howover, of the landsomest kind, with their funtastic-looking celeseros, in laced jackets of all colors, and long boots highly ornamented with silver, aro also popular. In the alternoon, when the troops are drilling, on the parade ground near the barracks, numbers of them, with three ginls ench, are flying around, enioying the erowd and the music.

Matinzats is quite a landsone city, though, from its division by the river, it presents a somewhat disjointed appearance. The houses are many of three and even four stories, which are in contrast with those in the other cities of the island. We wero particularly struck with the admirable counting houses of the merchants-so
commodions, airy and cool. We lave scen no where clse such excellent rooms for business as the factors of Matamzas have.

As in all the others, the thentre is a prominent instiation, and Rumsey, with his "Minstrels de Campholl," and Arthur Namoleon, with Mad. Vermay, a colelrated flutist, are ryins with each other in cutertaining the crowd. We find many visitors, attracted by the beatiful scenery of the Yumuri and the fine sea aid. The later is very agreeable when worthers are not present, but they are froquent aud make Matanzats not desirable dor persons with pulmonary disorders. The tenperature is often ten degrees below that of Trinidad, and $54^{\circ}$ to $50^{\circ}$ are not weommon. The climates of Drimidad, free from morthers and so equable, is far preferable. On arvivig at Matanzas, we foum th cool norther, and thick coats absolntely mecessary-which we have not previously required. We dined with a most interesting family, and spent a pleasant day-upon leaving, we wero kindly presented with a fine specimen of a Chamelcon, which was canght in the diuing-room. It brecds on trees in the gardons and woods, and is quite hamemess.

Waring letters to the hospitable proprietor of La Apiathe, at Linemar, we took the car at 9 a. m., and arrived at his beantiful ingenio at 10 , in time for break fast, finding another party of visitors just returniug from a moruing ride-the ladies in ecstasy with the easy paeing ponies. We were recoived with great cordiality and a hearty and conteous welcomo, by Mir. A. C., the son, who manages the estate. Sfter the full descriptions, by Miss Bremer, Miss Murray and Dua, of this admirably managed phatation, we searecly kiow whet to say of it. Wo have visited many and hager, but we have nover seen a sugar estate better ordererl, or so systematically administeret. The arrangements are exact in all departuents, and carricd out with case and a succoss which well repays the minute attention of the manger. The is highly intelligent, well educated in Jaris, alud by extensive travel, and fuldy appreciating agricultural improvement nothing is lost in the various processes, but everything turned to account-the escape steam is made to heat the reception pans of cane juice, and if a horse dies, be is buried in the manore pile, \&e.

The process of sugarmaking scems hore to be very simple, and the machinory not at all complicated. The hands in the field, with a long knife, cut the cane close to the ground, top it, and throw it from them, to be takon up by others, who strip off the blades, and throw it into the ox-cant close by; when cight or ten carts are loaded, they go to the sugar-house, where the cane is omptied and piled fround the press or crushing machinc. This is fed by a wide trough, and as the cano passes through the press of three heavy cylinders, it is crushed and deprived of its juice, and falls into a cart below, to be hauled away and dried for fuel. It is then called bagasse, and is dried in piles, by the women, and covored with blades or housed-being the only fuel nsed for the firmace. It requires to bo most carcfully watched, as it is Iike tinder, and a fire is fatal to the hopes of the plimter. The lower blades of the cane in the field being dry, ignite readily, and often the whole crop is swept by the work of an incendiary. Last year there were extensive fires, destroying many crops.*

[^3]It is satid that, in some parts of the island, blach metzi is levied on the plembers, and money freely given to lay oxemption from rillainous stipendiandes, known only by anonynous letters, demanding a tribute. Every precaution is necessary, in conseglance of the danger of fire, and the price of the estates is essentially aided by numerous blood-hounds, which are turned loose at ninht to kecp off strangers. They are very severo, and greatly feared.
The cane juiee passes inn reception pans heated by steam-now called grapappa-mand then into other pans, called defectors, where lime is atded to neutralizo acidity. It then goes into a sheeession of boiling pans, and is skimmed--the scum passes into tanks, from which it is carried to the monure pilc. The juice in the last pan, when of the proper proof, goes into Jarge vats, and after standing twentyfour hons, cools into Mirscovado sugar, and is put into hogshoads.

The hogshoads are camiod into the draining or purging honse, and lhaving holes in the lower end, are placed on a floor of mek work, for the molasses to run into long tronghs in a lower
story, terninating in tanks, from which it is put into hogrsheads.

There are various estates on the island, on which dayed and refined sugars are made, and in preparing the latter, the machinery is very complicated. On Mr. O.'s estate, you have a fair specimen of a model establishment-though not large it is mosk eflieiently worked. The visitor here has beantiful walks in the avenues of the Royal palm, of the omamental mango, or the picturesgue cocoa-mut or cocot-pathe. ITe finds in the variety of tropieal fruits and howers fall occupation for his botanical knowlelge, or he can starly the hane black aut, so destructive, in its colonies and varions chatacters of intustrial pursuits. Ife can fiad the chaneleon, the tarantula, the scorpion and the centipede of colossal proportions, to tax him farther-or in the woods and fields, birkts which ho has neror seen before. The large oxen hauling inmense wagons of cane heavily londed, attract the attention, not only by the mamer of being yoked by the horns, but by their admirable training. They are divided into two sections, one of which works a week, while the other rests, altornating with regularity.

They are of fise size and fat, and are the best specimens wo have sech of the improved breed of the cometry. 'Iltis estate is the only one we have visited where impored agriculture from older combtries and bouk knowledge are adopted, and in all departments we see progress indicated.

The negroes are well looking and well cared for, which is not the caso on some estates we visited. A large number of little ones is the evidence of good treatuent, and a general healthiness seems charatetcristio of them. Our party was amused in seeing a crowt of children collected at the piaza, dropping won their knees with the regularity of a drill by the old nurses, to receive the benediction of "old massa," who, in addition to the "Adios," usually gave each a biscuit, to their great satisfaction. We wish some of our Abolitionists at home could sec these blessings in their proper light.

Returuing from Limomar to Matanzas, we had the opportmity, next day, of risiting the Cumbre, a hight ridge of mountains, from which the wiow is enjojed of the romantic Yumuri Valley. Some of the party went in tolantes and others on horseback, up the worst rocky road we
have ever sem-a disgrace to commissioncrs, if such there be in this eountry, where most things are totally medecten. As you aremb the Chmbre, the Landseape below suldenty bursts upon your viow, rith its sugar estates doted orer its face, and the pet-green cano suronding them: contrasting mose acreenbly with the deeper colored foliage of the tall pabs and cocoa-patma, scatterert or in momps. The gentle unchulations of the valley-the steans meandering in the distance, with the elevations of the l'an of Malanzas, and its kintred hills, closing in the rich area below, present a phomama of expoisite beanty. Wo camot compare it with the Valley of lrimidad, so much more extensive; but more circumseribed, it is not surpassed by any singlo view in that laxarions remion. For miles the oye is filled will seenes of beanty, and tho pietorial creations of tho pencil of the most imaginative mind camot present more novel atistic exhibitions of the gentleness and romance of nature's scenery. A visit to tho island is not complete without enjoging the richness ant magnificonce of the quiet beaty of the Valley of the Yumari, and a visit to a coffee plantation in the neighbor-
hood. The following description, ly Ballon, gives a'rood illea al ins interest:
" $A$ coltee plantation is one of the mosi beantiful gadens that can woll be coneeved of ; in its varicty aml beaty babling correct deserpution, being one of those peculiar eharacteristics of the low latitudes whieh mast be seen to be unterstood. An estate deroted to this purpose nsually covers some three landred acres of linel, planted in regubar squares of eight acres, and intersecterl ly bront allegs of patms, mangoes, ormures, and otlee omamental and beatiful tropical trees.* Mingled with llese are phented Itmons, pomegrat nates, eape jessamines, and a species of wild heliotrope, fragrant as the morning. Conceive of this beantiful armangent, and then of the whole when in flower; the coffee, with its milkwhite blossoms, so abumlant that it seems as though a pure white clond of snow had fallen thore and left the rest of the vegetation fresh and green. Interspersed in these fragrant alleys is the red of the Mexican rose, the flowering pome-

[^4]granate, and the large, gaudy flower of the peron, shrouding its parent stem in a cloak of scardet, with wavinge here and there of the gracefal fellow flars, nuch many bewitchinglyfragrant wild flowers, twining their tender stems about the base of these. In slort, a coffee plantation is a perfect floral E.l Dorakh, with every laxury (except ice) the heart conld wish.
"The coffec-plant (cothea Arabica) is less extensively eultivated on the island them formendy, being found to yiold only fur per cent. on the capital invested. This pant was introduced by the French into Martinique in 1727, aud made its appearanco in Cuba in loge. It requires some shate, and hence the phantations are, as already described, cliversified by alternate rows of bananas, and othex usefnl and ormamental tropical shmos and trees. The decadence of this branch of agriculturo was prodicted for years before it took place, the fall of prices locing foreseen; but the calculations of intelligent men were disregrarded, simply beeause they interfered with their own estimate of profits. When the crash came, many coflee raisers entirely abandoned the culture, while the wiser among them
introducer improved methods and cennomy into their business, and were well rewarded for their foresight and rood jutguent. The old method of culture was very careless and defective. The plants were siown very close togetlier, and subjected to serere punimg, while the fruit, rathered by hand: yiedded a mixture of ripe and muripe berries. In the combtrios where the colfee-pliant. originated, a very diferent method is pursued. The Arabs piont the wees mach frother apart, allow then to grow to a comsiderable height, and gather the erop by shaking the trees, a method which secures only the ripe berries. $A$ coffec plantation manatred in this way, and combined with the culture ot vegetubles and fruits on the same ground, would yield, it is said, a rlividend of welve per cent. on the capital employed; but the Cuban agrienlturists lave not yet leamed to develop the resources of their favored island."

## gIIAPTER XII.

"Thee hundred banner'd knights was indeed a gallatit slow; Three hundred shaven Moors they killed, a man at every blow. The Chrishime eall umons. Jathes, the Moors upon Mahound; Thacre were hirteen huadred of them stain on a little phot of gromd."

Havand, March 3, 1860.
Steamers leave Matanzas every night for Havana, and the cats every moming, oconpying abont six hours in the transit. The road runs through a country similar to what we have described from Cardenas-sugur cane and plantains being the crops through which we passed. Occasionally, a small fied of corn is visible. It is yellow, but sweet, and makes passable hominy.

Arriving at Ilavama, we find the officials "stirred up" grandly at news from Tetnan of a great victory of the vadiant Spaniards over that small town. It takes very littlo to get up a grand "funcion," and the bells are ringing, and camon firing from the Moro and the men-of-war in the harbor, some of which seeus to us stationed especially for such demenstrations. For
two nighte, the palace of the Onptain General las been briliantly illuminated, as well as many Jouses in the reighborloort, fand the Plaza thronged with crowels of farhiomables and cabaille, begeras in tatters, as well as erinoline, fine linca and broadectoth. Four bands of masic were out listributing melody, white the regula entertainment of the l'laza was dispensed as usial. Th several of the rifeets, flags are extended across the whole extent, and Moors, hung by the neck, dangling in the air abofe fou. These valiant people seem actually impressed with tho idea that flocy have whipped all. creation, and the prourlest exeitement pervades the masses.

For three days tho feste is to be kept up, and as it is Lent, a dispensation has been granted, under the cireumstances, by the Bishop of Havana, for a most elaborate and magnificent, masked ball for to-morrow (Smaday!) evening, when the farce is to be closed until the next nows. At tho grand "funcion tourica," bullfight, on Sunday last, an inciklent ocemed, which somewhat alamed the three or four thoustind spectators-a severe grest of wind came up, and
the flag-staff was broken, and the Spanish flag, "blood aud gold," actually fell into the arena-a bad omen--but the bull Tetnan, decurated by ribbons and ormaments from the hauds of the Condesa, was killed, and the city is now reported as taken! What a coincidence!

A friend who happened to be at Matanzas gives us his experience there on the occasion of celebrating the victory:

## "You Know Wimere, March 2d, 1860.

"Dr. R. W. Gibdes.
"Dear Sur: Since your departure we have had considerable excitement. The news of the fall of Tetnan has caused as much moise hereabouts as whilon that of Sebastopol. The Spaniards are doing their best to imitate the Frencl in all things military. Read the court addresses, the army bulletins, the speceh from the throne to the Cortes about the war, tho subscription on foot for the army, and then take up similar documents from the other side of the Pyrenees, and with a few changes for dates and names, you have almost copics of the French addresses, specches, \&e. Thus it is with the great and
glorimes nation who, for the third time, (no doubt of it , are saving the cause of civilization and christimify in Europe. A patristic poet, after stringing togetber the largest moment of highsomming and bonbastie expressions the Spanish language em produce, recoming the glories of old, (!) (not having anything newer than Tetuan to speak of, ) recalla the glorious achievements of the Gid against: the Moors in days of yore, and winds off with a hint to the Yankees, moes unmistakably pointed for their especial benefit. He says that some foolish mations have thought Spain dend, hut bewar! she has proved she was only slecping, and has now arisen in her might to cary terror to the hearts of her foes! so I beg of you all to take your hats off and be civil, or else there is no knowing how som your cities may not fall as fell Totman.
"By supreme decree, \&e., \&e., three days were set aside to celebrate the umparalleled achievemont, and the bright spot which appoared on the escutcheon of Spain, so long doomed to mould and decay, was to be hailed as the harbinger of the resuscitation of the national honor. And so, for three days have all the guns, blun-
derbusses, pistols and camon been roaring forth loud notes of prase to the heroic army whe, in the face of mheard perils, trials unter which other troops would have quailed, (te., dec., have so signally convinced the wodd (meaning thenselves) that Spain has awakenel to a now oru of glory and power.
"In Matanzas, the proceedings were exceotingly noisy; and powrler enough was expended in this one fown to have blown the kingdom of Moroceo, and Africa besides, over into the Pacific. The dangor was imminont to those who had any business to attend to, as the glorious descendants of the Lions of (astile appeared perfectly reckless of the life and limbs of the passers-ly, and most certainly appoared to me sore like the nsses of Oastile clothed with the Hon's skin. There were numerous balls, levees, dinners and other demonstrations to satisfy the cyes, the cars, the legs, and what appeared most difficult, the stomach, as those can testify who sat down to the entertamment at the Baracks, given by the officers of the garrison.
"A Moor in effigy was dragged about the streets, accompanied by a coutle of policemen,
and rag-tag and bolj-tail brimging up the rear; at the street conters shots were fired at the fallen Moslem, with shouts for the army, the Queen, Se. One individual in the height of his $p^{\text {natriot- }}$ ism, after several very effective diselarges, thought to inerease the moise and fun in proportion to the loan of his argueluss, and contrived to stop his own noise for some time, as the venerable pieec of irou exploded, severely wounding him and searings several others into their senses.
"As for the Cubans, I have seen none take any part in the demonstration; the balls in honor of the oceasion were very poorly attented, and all appeared hewtily ghad when quict once more resumed its sway. They certainly are aware that, no matter how the dance gocs, they will have to pay for the music and the broken cups and salucers.
"What a bright idea it would be now, if the Govermment wond just ship off to the scene of operations the several thousands of black troops now in such a berntiful state of discipline in the island, and try the valor of these worthy allies and comrades in arms of the defenders aud herocs of Castile and Jicon!
"I have some of the poctry writion for the oceasion, and should yon desire, wild forward translations."

Itavana is crowder with American visitors, mostly from our Northern States, avoiding cold weather, but they are cmbarking too early for New Ofleans en, poute for home. Tho hotels are all full, and somo diflieulty is experienced in finding accommodations. The sailing of the De Soto for New Orlems, and a desire to aroid tho risk of fancied equinoctial gales, two weeks hence, latve cansed somewhat of a stampede, and her state-rooms are all engraged.

## Chapter Xifi.

*So masic penst is obsolete-
And yet 'twas sweet 'twas passing sweet! But now 'tis gone awty."

## Ilavana, March, 1860.

In front of the Captain Genempls palace, which is a handsome and commodious residenee, is the Plaza de Amas or phblie square, laid off hand. somely and planted with beatiful trees, among which the royal pah is conspicuons; and rich flowers bloom. It is paved with flag stones and provided with bonches, and in the evenings with chairs for the gay population to enjoy the music of the Government band. It is small but quite a liandsone garden, and seems to be carefully attented. In the centre is a statue of "I $\mathrm{I}_{\text {NDIA }}$ " survounded by an iron railing, and across the street is a small ehapel erected over the spot where Colnumbus is said to Lave first had mass on his landing. During the evenings, especially on

Sundiys and fenst-days, crowis congregate in tho Pleat to promenade and hear the masic.
Not far from the Phar is ane of the most important institutious of the city---the Dominica-... one of the best ertered and most elegant cofes in the world. It is large enough to accommolate in its marble hall several handred persoms at one time, and is the resort of ahmost. every borly at sance time of the diay. In the contre is a foumain; and in all directions fou find marble tables of varions sizes and shapes to accommotate parties suitably. Gall for "chocolate," or "cafe," or "dulces," or iees, or the delicious orange granizadu, or the Jemon panalis, or cekes of endless variety, and you are served with the accomprament of the puff of a rich IFabova or a deliente cigarillo from the next table. Every body smokes execpt yourself, perhaps, and the presence of ladies is "nada"they smoke, too, if they please. Surromuded by representatives of all mations and peoples and tongues, you Juve a jargonic noise, in which the Joud voice of Los Lispanoles, with their rich, sonorous intonation, largely predominates. The Dominica is the meeting-place of friends at
my hour, and you see the crowd at that very fime.

Ifaring mioged the luxuries of this grand cafe, you step aerons the strect to see the manufictory of dultes, and before you enter you are regaled with the rich atmosplecre of gurve that pervades the neightorthood. IIere you fud stean engines at work to supply the world with jeilies aud mamaloules, and preserves of all the fine fruits of the islant. The foreign hasiness is immense, and the quantitios of hage boxes constantly hauded out to the wagons at the doors attest the foct.
Next to the essential Dominica, the most attractive resort of the Cuban, is the "Teatro de Tacm," a splendid and spacious building a short distance beyond the walls, opposite El Campo Militar, adjoining the Pasco Isabel-leading to the longer called Paseo Tucon, a mile Jong, so called from its projector. The external appearance of this theatre is not striking, but the tastefin arrangements within are paticularly so. The light iron columens and railings, and open fomation of the boxes, give an airiness to the buileling especially adapted to a warm clinate,
and the accommodation of there tiers of boxes and two gallerics is cxtensive-the pit alone lating separately manbered seats for one thomsand persons. It is well eonstructed for speaking, and the exhibitions aro very eflective. The decorations are costly, and the frescoes and side ormanents of the proscenima beantiful. From "grave to gry" -or rather, from the gray to the grawe-we pass through the outer gate, Puerta del I'unta, to the Compo Santo or public burying-grotud, where rich and poor have theix bones alike placed, though not in their last resting-i, lace. The fomer are shoved into nielics or oven-like recesses in the thick imer wall, and the latter are placed coffinless in the gronnd in shallow glaves, and are sprinkled with line to hasten decomposition, so that their bones may easily be removed to make room for others. Respect for the doad is not charneteristic of Cubans, and this may be seen oxemplified on any afternoon by any visitor to the Campo Santo of Havalua.

Next to the prison-honse of the grave is one of TACON's public works, which characterised his administration-the Presidio or prison, erected

TIE PASBO.
of yellow stone ontside the walls, near the fortress of the l'mata. It is buitt in the form of a parallelogram fwo handred and forty fect front Jy thee hmedred fect deep-ant on the eastern front on the loft eontans the dwelling-house of the Alealile, am? on the right the Cuerpo do Guterdia on guard room. Arrangenents exist to separato the whites and colored prisoners, and those who ean fay get $\begin{gathered}\text { gomewhat different ae- }\end{gathered}$ commodation from otlers, though there appeared no provision for slecping but on the stone floor.

The Pereo die Tacon allurded to above extende to the Okero, formerly it viliage on a height, about three miles thom the eity, but it is now a part of the suburbs-the barios estra muros exceeding the eity within the walls, and having wider streets.

The Baños Publicos, in this warm climate and dusty city of IIrvena, are wortliy of special notice. On the way to the Campo Santo you pass soveral in the Calzado san Lazaro. They wre cut out of the soliti limestone roek, on the edze of the const, in spaces of abont twenty faet square and three to eight feet deep, the outer
wall perforated with holes to allow the water to flow in and out. The temperature of the water of the Gulf stream which suphlies then is about re $2^{\circ}$, and the dinger of sharks makes this prorision for bathing cssential to salety. There are separate batlis for females, and for persons of colo-all which are covereal by a wooten roof. There are, also, bath honses in liavana, where you lave wam or cold baths for the moderate charge of 25 conts-ono near Ta Grandss Hotel, where the entrance is throngh a billiard room, is much patronized by Americans, both ladies and gentlemen.

Of tho institutions of Jearning in LIavana, the chief is "The University," founded in 1728 and re-organized in 1842 . It is intended chiefly for law and medical students; has some thirty professors, and the foundation of a cabinet of natural history-insects, minerals, fossils, shells, \&c. It possesses a small library containing some valuable books, which is quite respectable for its size. The building is a very commodious one, in the form of a hollow square, with a gaxden containing many interesting plants.

Access can be had to it at any time without a
pernit, but a letter to one of the professors is always desimble.

There are sevem Tustitutes or Colleges for the branches of secondary edueation, as well as primary sehools. One of the principal literary establishments is tho Sominary of St. Charles, fourded in 17t.t, where a limited number of young mon are chucated for the ecelesiastical profession. The instruction is confined to Latin, Natural Philosoply and Theology.

Much improvenent in public elucation hats taken place since the estalbishument of the Eeconowical Societices of Mavana and Santiago do Cubat. The olject and purposes of these societies were"to promote agricnlture and comwnerce, the breeding of cattle, the industry of the country in gencral, and, as occasion offered, the education and instruction of youth."

These institutions have, however, not been as successful as they slould have been, in consequence of jealousy on the part of the Government. They have, however, founded and led to several important charities-the Casa de Beneficenza, or Charity Home-the Casa Cuna, or
l'ounding ITospital--and the Casa de Looos, Insanc Asylum.
In Tharana there aro five daily papers, and one weekly. In Matanzas there are two daily papers-in Trinidad one, the Comeo. In Sm Papiritur is at dity paper, and in other towos, eommereal reports, ecomomical sheets, are oceasionally published.
With a parly of ladios ard sentemen, we visited the fortresses of the doro and the Oto banos, and recoined the politest attention from the eolonel commandant of the latier, who acompanied us and explained tho several departments. The Moro is astrong fort, on the top of a limestone rock, and commands the entrance to the bay. It was first buitt in 1683 , but was destroyed by the British, in 1762. Tho present structure was then rebuilt. On it is a lighthouse, and within its walls are dungeons for prisoners condemmed for grave offenees. The Cabanos is the great fortification opposite to Havann, extending around the bay for neally half a mile. It was forty years a-building, and is chicfly liown out of the solid blue limestone,
and is immensoly strong. The barracks are on cach sido of the extensive gaseo, and the cells for prisoners, many of whom are sent liere; the commandant sad there were not less than a thousam atiperesent. There are accommodations for 10,000 troogs, and ats maly more can be provided for in tents, as the aren within the walls is resy extensice. 'The water cisterns under it extend a loner distance, and are capable of surplying a long siage. The number of guns momed is very large, and they are heavyanoug them are lage ghe bearing the mames of the wolve apostles. The depots of balls covered up by mason work, are mumeros, and the quantity must bo very large; tho magazines of powder are also extensive. The oflicer, in showing us aromad, led us througli a perfect town in cxtent, and politely tork us to the finest positions on the bastions to enjoy the secnery. The view of ILavana is, as he termed it, "immenso grande," and presents a picture of rare benty. We are not surprised at the pricle of the Spaniards in their beautiful island, which, in air and sconery, camot well bo surprassed; and in fortresses is abundantly suppied. Tho cost of those above
mentioned is said hyperbolically to have been $\$ 160,000,000$-nearly as much as las been proposed to be given ley one Goverment for the whole island. We ought to own Cuba, which would richly repay its cost at double that sum. A liberal govemment is greatly wanted, and Spain would be relicved of a heary burden by its salle, while wo conld treble its productions in a few ycars, and make the whole island a perfect gaden. The pertinacity of President Buchanan, in kecping its purelase before Congress, is probably based on the fact that there is a growing party in Spain, in favor of selling it; and ere long the proposition may not be offensive to the prond Castilians.
"Regla," which is located on the other side of the larbor, opposite to Llavana, formerly was notorions as the resort of a gang of pirates, whose atrocities on the consts of this island became so flagrant, that the Govermments of the United States aud England determined to send a combined squadron to root them ont, which they did most effectually. The last caso of piracy occurred off Cape "San Antonio," in the year 1839, when a Halifax brig, bound from Jamaica
to Nova Scotia, fell into their power; all hands were murderel, except one man, who swam to the shore and gave infornation which led to the capture of the pirates, all of whom were execoted at IIavana. Regrit can now hoast of splenclicl stores for the deposit of sugar; fine, substantial wharves, and many other shipping facilities, which will, in the courso of a fow years, make it a very formidable rival to Havama.

## CIIAPTER XIV.

"When first his drooping sails Columbtis furled, A1sd sweetly rested in :uother world."

We visited frequently the nolle old eathedral of San Iguacio, and admired its stately arcles and fine frescocs. Mass is perfomed every moming at eight o'clock, which is a favorable titwe for a visit. After this servien, the old building-600 years ofl-cem be inspected, and its fine pietures seen, ol' which there are several of great merit. Among them is a grood painting of Sem Christobal; the patriot saint of ILavana, bearing on his shoulder tho infant Jesus with the world in his hand. Anotlice is of Dharia Conceptionis, the patroness saint of the cathedral, standing on the wortd and ernsling the serpent's head with her heel. The fincst work, however, is a Virgin and child offering an olive branch to several persons in purgatory. It is woll painted and very expressive. The floor is
of variegated mathe, and the high altar a pillamed dome of rich Fgyptian priphery.

The del sacristan who shows you around, presents you with a cari-nand papelita de Colon-on which you have a cony of the shab wer the remains of the great Chistobal Colonwith a memomalun of his life, and varous interments; for this, he expects a present of a peseta from you in rehum.

In the rear of the cathedral is a college for boys, where there are alout forty in troning for the priesthowl. Tn the fradangular area is guite a prefty garden. The eathedtal is a fitting mansoleum of Christonal Golon, whose ashes, in an urt, are enclosel in a niche within its walls. Tho spotis on the right side of the great altar, and is marked by a basso relievo, in white marble, of the great communder, with tho Jollowing inseription:

O Restoss e Ymagen del gran Colon!
Mil sighos durad guardados en la Urua
Y en la reniembranza de nuestra Nacion.
Upon leaving the cathedral, one monning, wo thought of taking home a memorial in the form of a bronze statuette, or an engraved portrait of
the great arlminith, luat we seareher the stores of the eity ineffectually, nothing of the kinel being known in Lavan! Wo recollect a few yeurs since hearing fiom a friend who hard resided at Genom, that there was no anthentic bust or poltrait of the great Columbus in his mative city! It is a poor excuse that he left it in early youth, and becaure distingnished atter the age of filty.
As ererything relating to this remarkable man deserves to bo well known, wo have concluded to give the following accomt of the ecremonies on the oceasion of the reception of his remains at Havana. Dr. Wurdeman says:
"The Spanish account, published at the time in Llavana, and which is now ont of print and very rave, describes the cermonics attendant on their reception as laving been conducted with motel pomp. On the arrival of the vessel, the whole population of the city cauc forth to receive them; and the ecolesiastical, civil, and military bodies vied with each other in rendering honor to them. On the morning of the 19th of January, at mine o'clock, three lines of barges and boats from the vessels of war, dressed with
mourning, were seen approaching the Mole. One, wecupying the centre, bore a coflin, covered with lhack velvet, ormamented with fringes and flakes of gold, and gunded by a company of marines. It was bronglat on shore by the captains of the vessels, and received by the city atheritics. Alternately home by four of the most distinguished citizens, it was conveyed to the Phaza des Armas, in front of tho column erected there by the city, in commemoration of tho first mass which, accorling to tradition, had been colebrated on that spot.* It was here phated in an olony sareophers, having the form of a throne, beatilully wrought with gilt carvings. This was supported by a bier twelve feet long and five high, covered with folls of black velvet, ornamented with golden flakes and lacings; while from thí four corners of the sarcophagns as many golden cords hung, termimatins in tassels of the sane material, which were held by those, who, in their turn, had the

* The tree unler whicls many of the good Habaneros believes that Colambus sail mass, is now removed; and a chapel is erected ou the spot, in commemoration of the same; in front of this stands the colume.
honor to escort the remains. Around this, six long, thick wax camelcs continually burned; they were supported on comncopias, of the same wood and workmanhip as the sarcophagus. The pavements were carped aromat inis sombre spectacle, and beside it was is talle cowared with black velvet, supherting then cushions of the same material fringed with gokd, and thity-six lighted wax tapers.
"The coflin haring been placed on this, the Goternor, the (hatain Gencral, and fhe commamber of the royal marines approathed, and by order of the first it was opened. Within was seen a gilt leaden chest, about a foot and a lable square, and one high, seemred by an iron lock. This was opened by a key, aurd disclosed a plate of the same metal, and a swall piece of bone, which, with the ashes it also containel, was evidently that of a body. These were then formally pronouncel by the Governor, nud the other illustrions examinere, to be the rematias of the incomparable Almirante Christoval Colon. It was now closed and locked, and. put into its coffur and the latter having been replaced in the clony sarcophagus, the procession was formed
and prococled towards the cathedral, from which the musie anid responses were oceasionally heard borne on the passing breeze.
"In front were four fiedepicees, drawn by cight pair of batek males arrayed in momming, and led, cach by one footman. Theso were followed by four white lorses, caparisoned with fine black cloth borlered with gold, and decorated with the escatelieon aud arms of Culumbus, each likewiso led by two footmen. Behind roote the Colonel and Tientenati-Chomed, sword in hame, at tho head of the grentaliers and militia. 'Then cane the cross of the cathelval, escorted by seven orders of monks, the eloggy, and the vencrablo ceclesiastical chapter; the bier, carried by eight men, and followed by the Captain General and other eivil oflicers; the gratd of honor, the military stafl, aurl the citizens; the whole surromded by a body of dragoons. The streets through which they passed were decorated with suitable enblems, and the walls of the houses hung with drapery; while salvos of artillery and volleys of musketry wore continually fired by the armed vessels and garison, until the temination of the whole ceremony.
"Conducted with this promp, the coffin was conveyed to the cathedral, the pall-bearers hotding the golden cords of the sareophagus, boing fiequently relieved by others; for the proud of the land eagerly songht, if but for a short time, the honor of this office. The whole ehurch was earpeted; numerons lage wax camelles placed at regular distunces, by their land light, adrled to the sombre air it presenterl; while the altar literally blazed with the Aames that bumed on and around it. The massive columus and the doors were covored with humers with expressive <lesigns and verses inseribed on thom, relating tor the listory and death of the groat discoverer of America; and in the centre of the churel, under the dome, a pantlieon forty feet high and fomteen long, erected for the temporary recoption of the remains, by the splendor of its decotations, added not a little to the granden of the whole. The coflin having beon deposited on a stand, amid twenty large wax tapers, at the door of the eathedral, was there received by the diocesan, Don Felipe Joseph de Trespalacios, dressed in an ample hlack cloak, and was conreyed to the pantheon amid the solemm music of the chmeh,
the rexponses of tho chapter, and the masses, Which from daty-break had been said for the repse of the sond of the deat.
"We have alroaly adrented to the beanty of t. 10 paththenti. It was of the Ionie order; the lower part resting on a socho there feet high; was composel of sixtoen colmmen in prirs, fow on each side; the pertestals and capitals larmonizing with the friegel arehitecture and comice. The columns, imitating white marble, were gilt and bronzed above; mal over the comice on each sicle was a frontispicee, with passages in the life ol Columhos ligured in bass-relievo. Abore this, on a pelestal, with a vighette of a crown of lamels and two olive branches, an obelisk was erected. At its foot, the escutcheon and urms of Columbus whe figurorl, white it was further omamented by thee figures:- The with his seythe and hour-ghass, bot having his hend fied behind him,--] Denth, the conqueror of all, limself prostrate, -and Pame, her right hand holling a sempont, in the slape of a circte, the emblem of eternity, and ber belt, a elarion, with which she proctaimed the ghory of her hero, immortat in definace of lime and Death. The
arches also contained figures,-a woeping Genius in front, and on the sides, nautical trophies.
"On the sides of the obelisk not oceupied by the figures, merlallions, imitating grey jasper, were infaid, having tho following inseriptions:
"Christophori de Colon cineribus ex Dominicano [nsula, quam ditioni Castelle detexit ao subjugavit hue translatis in perpetua gratitudinis signam Mavana civitas hoe mommentum erexit, A. D. IndodXOVJ.'
"Siste viator magui Christophori Colombi ex Lnsula Gancti Ibminies tramshate hic eineres incent. Miabile Visu!'
"cllavam eivitas in pignus gratitudinis enterne hoe monumentum extulit in trashatione cineram Christophori de Colon, ex Dominicani luselit, Amo Domini, 1796.'
"On ench side of the socte, a stair of four steps, in initation of grey jasper, led into the interior of the pantheon, where the sarcophagns, already described, was placed; while between the columens, folds aud loops of black velvet, fringed with gold, lung in festoons. On the sides of the bier were placed two statnes, resembling white marble, and larger than natural. One represented Spain as a beantifnl matron, with the imperial crown, and dressed in a flow-
ing robe, embroidered with castles and lions; her right hand grasping two sceptres, and her left pointing to two worlds. The other, America, with her bow and quiver, and her plamed crown; orincing by her posture, the gratification with which she atchowledged the dominion of Spain. At the heal of tho lier, a gilt tablet containerl the following epitaph:
"'D. O. M. Claris. Meros ligustin. Christophorus Columbers a se, rei nautic. seient. insign. nov. orb. detect. atitue (hatell. at hegion. regib. subject. Vallisol. oceul. xii. kal jun. A. M. DVI. Gartesianor. Hispal. caday. custel. hradt. transfer nam ipse preserips. in [tisponiole Metron ece hine pace sarcit. Galliw reipub. cess. in lanc $V$. mav. conecpt. imme cath. ossa trans. maxim. om. frequeut. sepult. mand. xiv. Feb. A. MD. C. (XX. CVl. Inazen. Oivit. Itant. vir. meritor. in se non immem. pretios exuv. in optat. diem ${ }^{1}$ tuitur. hocee monum. crex Presul. JJ,T. J), D. Plillippo JPIL. Trespabacios civie ae militar. rei gen. pref. exmo. D. 1). Litulovico de las (dasas.'
"All the comices of tho frontispiece were illuminated, as well as the angles of the obelisk, to its summit; while below, surrounding the whole pantheon, a hundred Large wax candles on stands
of a suitalle size, aurl above, as many more, enst their lights on the golden ornaments. 'The mion of the whole, and the exquisito apparance of each particular part, presented to the eye a mass of sombe magnificence, that elicited the admiration of all the spectators. The service of the dead was now solemuly chanted, and mass celebeated lyy the pontifieal and illustrions diocesan, which was followed by the fuucral oration, delirered by Don duseph Augustin. 'The last respenses were then chanted, acompanied by solem music; and the conlin, borne by the Field Mashal, the Intenkente, and other ligh wheme was conveyed to its destined resting phace in the walls of the church, as already deseribed, and the opening to the avity closed by the mate stib.
"Thus terminated the ceremonies of the day; more remarkable for their olject, than for the extrominary conconse of poophe, of both sexes, who lilled the strects, the Plaza, ind the Church; and the universal homage which the high and the low alike paid to the memory of departed worth. The resting-place of hin whom five
eities elamed as a son, is, moreover, by this record clanly marked; and a pieture of the earlicer days of llavan, alahough only a partinl one, pesented to us. It is also remarkable that, nomid all tho designs insoribed on the baners, but one contained a slight allusion in the persecte tions which his brave man sulfered from his sovereigns; as if silence could efface the stain they left on the escutcheon of his country. One of the bamers bore a patm-trec loated with chains, and the moten, 'Alversus pentera surgo.' A wote to this siates that 'fot ereer.
 enterpado con tos grillos, nape de que jamas los perdio de visth, putes siempre los conserve en su retrete; $y$ asi miamo, pittio por clausula on su testamento, que los enterrasen con ellos.' No mention is mado of aly fetters having been found with his remains in the cathedral of St. Domingo, and his ashes were transferred to tho silver urn, that now holds thein, on the adoption of the now constitution by Spain. At the same time a con,y of it was placed in the leaden chest, and the old stone removed for the one that now
closes the opening in the wall, and which bears the following inscription:

> "O restos ó imágen dol gran Colon!
> Mil siglos durad guardados en la Urna
> $Y$ en la remembranza de utestra nacion."

The most authentic portrait of Colon in the United States is a copy of that in possession of the Duke de Vernguns, the deseendant and present representative of the family, which was brought from Spain by the IIon. Mr. Middleton, formenly Minister. A fine copy, by Chapman, is in the possession of Gouverncur Kemble, Esq., at Cold Spring, near West Point, N. Y. It represents him as of fail complexion aurl light hair, while the ordinarily received portraits present lim as of dark skin and swarthy.
It is a singular coincidence that the remains of the two greatest men, made illustrious by the discovery of America, should linve been removed

[^5]and reinterred about the same time during the close of the eighteenthe contury. The following from Mr. Prescolt's Mexico, as to the removal of Heman Cortes, is a suitable accompaniment to the foroguing :
"Thes Inderabent of tue Marourse of the Vashey of Oadaca, Melenan Cortís, and of has Dregendant, Don Primo Cortís, whig rade place te this City of Mexico, Fleb. 24, 1629.
"The remains of Don Weman Cortes, (the first Marquess of the Valley of Oajaca, which lay in the monastery of St. Prancis for more thim fifty years since they had been brought from Gastilleja de Ja Cuesta, were carried in funeral procession. It also happened, that Don Pedro Cortés, Marquess of the Valley, died at the court of Mexico, Jan. 30, 1.629. The Lord Archbishop of Mexico, D. Fxancisco Manso de Zuñiga, and his Excellency the Viceroy, Marquess of Serralbo, agreed that the two funerals should be conducted together, paying the greatest honor to the ashes of Heriando Cortés. The place of interment was the churell of St. Fiancis in Mexico. The procession set forth from the palace of the Mar-
gluess of the Falley. In the advance were camied the banners of the varions associations; then followed the different orders of the religions fratemities, all the tribumals of Mexieo, and the members of the Audience. Next came the Arehbishop and the Chapter of the enthectral. Then was borne atong the corpe of the Marquess Won Pedro Cortes in in open collin, succeeded by the remains of I) on Iemando Gortés, in a coffin covered with black relvet. A bunner of pure white, with a crueifix, an image of the Virgin and of St. John the Jivargelist, embroidered in gold, was carried on one side. On the other were tho armorial benrings of the King of Spain, also worked in gold. This standird was on the right hand of the body. On the left hand was carried another banner, of black velyet, withe the arms of the Mencuoss of tho Valley embroideral mpon it in gold. The standardbearers were armed. Noxt eame the teachers of divinity, the momers, and a fromse with sable trappings, the whole procession heing eonducted with the greatest order. The members of the University followed. Behind them came the Viceroy with a large escort of cavaliers; then
fow armed captains with their plumes, and with pikes on their shonlders. These were stacected by four companies of soldiems with their arepelouses, and some with lances. Thehind them banames were trailed ubou the ground, and maffled drums wore struck at intervals. The collin enclosing the remains of the Concumer was bome by the Royal Judges, while the kimghts of the order of Santiago supported the body of the Marquess Don Perbo Cortés. The crowd wan immense, and there were six stations where the coftins were exposed to view, and at cach of these the responses wore chanted by the nembers of the religions fraternities.
"She bones of IT. Cortés wore secretly res moved from tho chureh of St. Hrancis, with the permission of his Exeellency the Arehbishop, on the 2 d of $\mathrm{Ju} y, 1794$, at 8 o'elock in the evening, in the carmage of the Govemor, the Marques de Sicma Nevada, and were placed in a vault, made for this purpose, in the church of Jesus of Naza. retl. Tho bones were deposited in a wooden coflin inclosed in one of lead, being the same in which they came from Onstilleja do la Chesta, near Seville. 'This was plaeed in another of
crystal, witl its crossbars and plates of silver; and the remains were shrouded in a windingsheet of cambrie, embroidend with gold, with a fringo of thack lace four inches deep."

At high mass, after the news of the vietory at Tetuan, we were present, lant were disappointed at the masic, the organ not being worthy of so fine a eathedral.
Apropos des botters, speaking of innsie, our last evening in Thavana was at the great Tacon Theatre, where we enjoyed the fine music of Los Puritanos. Gassier was prima domb; but leer roice was motequal to the music. The theatre is beautiful and adminally arrager, as before mentioned, but its size is below that of the Acendeny, in New York, thongh it is said to liold 10,000 persons. This, however, is the exuberance of Spanish fancy.

Upon leaving llavana, we were desirons of selecting a few fine cirgrs to distribute among friends, and upon enquiry, we found the finest were $\$ 300$, and the next quality $\$ 255$ per thousand! Zounds, what a price! We contented ourself with those at $\$ 50$, and almost wished we
could appreciate Odoherty in Noctes Ambro. sience, where he suys:
"Sublime tomero, whicl, from cast to west,
Cheers the tar's labores, or the Turkman's rest ; Which ou the Moslem's ottoman divides
His hours, and rivals ophun and his brides:
Magnificent in Stambout, bat Iess grand,
Thongh not less loved in Wapping or the Stratad.
"Divine in hookabs, glorions in a pipe,
When tipped with amber, mellow, rich and ripe,
Like obler charmers woing the caress
More dazalingly when dating in full dress;
Yet thy tue lorers mote admive by far
Thy nalked beanties-Give me a Cigar!"
IIe may have said Buy me ore.
As a matter of courtesy the Government officials allow 500 for personal use to pass free of duty. If' you have more you are elarged.

## OHAPTER XV.

" Slow suall the choice from cratle to the gravo Betwern the lot of hiteling licip, or sfave! To eneh alike applice the stem deeree Lhat man shenl fabor whether bond or free.

The negro frecman, thrifty while a slave,
tonsed from restrulst becomes a drome or konve, Each effort to inprove his nature foils, llegs, stoals, or sleeps nad starves, but nover toils."

In reply to questions as to free lalor furd the Coolie system, a friend, an intelligent Cuban, writes as follows. The letter is interesting, and worth including among our notes:
"We are very poorly off as regards white help here, from causes I marrate below. In days by-gonc, the place of oversect; or mayoral, as it is called leere, was in the hands of creoles of the island, borm mostly on estates under mangement of their fathers, aud thus the accommating experi ence of each being handed down from father to son, rendered them fully competent to under-
stime the proper systen of managing large gangs of nemroes, muld aso to cary on all the worle of an entate, But since a few years, this class has been disapparing gradually from this part of the country, going fowarls tho eastern end, and now this delieate and important situation is thrown into the hauts of matives of Old Spain, or of Istenos, (Can:ury Istenclers,) generally laving been sent out here by ship-loads to serve out their time by contract-a most dehased and demomalized eleas, lower, intellectnaly, than the creole-negroos they are to grovern, and to whom lying and deceit are as life and breath. Men borm with one solitary ideth, and as incapable of conceiving a new one as of squaing the circle. At this we cannot wonder, for what ean be expected of the dregs of at nation where the best are but noted for profound ignorance, bigotry and momal decay?
"One can casily imagine the consequences of such example in the governed class, and the state of affitus is most trying and wearing to any one who wishes to "gret along," and at the same time is in th measure obliged to lave recourso to such elemonts. Aclel to this, that no one, unless in
actual want, will turn a hand to usoful and continued employment, where the eock-pit or grambling table can afford excitoment and food, and one mast foel surprise at tho immense mumber of idlers, whose only nccupation consists in dealing cards or matching cocks.
"Another most disastrons act in its future bearing upen the testiny of Cuba, is the importation (now suppresscd) of Clincse laborers, a most worthless sot, as far as labor gues, and a most dangerous one to our heterogencons socicty, when their total disregard of life to themselves or to others, and the absence of cerery morai or religious restranti is taken into consideration, as proves the immense increase of crime in every shape, and of which the greatest amount is of their committing. They are always found, after serving their timic ont, in little commanities on the outskirts of towns, forming associations of the most dangerous character against the safcty and order of the commonity they inflict with their presence; and a most serviceable piece of business on the part of Government would be the trinnsportation of such as are out of employment back to the Celestial Kingdom. Estimates care-
fully made on acighboring estates (ten) give an incredible item of mortality among them, viz: Among 460 Coolics imported on these places, the loss amomited to 48 per cent., of whicis 19 per cent. were from death by suicide, 7 fer eent. from rflects of use of ofium, it por cent. rum away or not accounted for, and the remaining 18 per cent. from death by disease; and 1 an told by credible persons that the mortality is still greater on the large places in the interior.
"We have, at last, the first of numerous wefoms promised by the 1 tome Goverment, but which I heliere are like the cakes or sweets promisod to guict a crying chitd. I allude to the first public trial of a criminal case in Cuba. Formerly, prisoners were placed in jail, and witnosses also, wihhout regard to oven the most important business, without ceen being allowed to see il fricnil, or commmicate with one, and there left to await the slow progress of Spanish buw, often learing the cell for the tomb, from diseases contracted in the unwholesome cell. Where judges, mot accomitable to any one for their proceedings, received large bribes to fatsor one or the other party, to the exclusion of all
justice, the utinost corruption of Jaw must exist; but where, in a mensure a sort of publicity is given to their decision by an opea trial, ibey camot flagrantly violate existing laws at them plasure, and withont incurring a degree of consure which no one will risk doing openly.
"These changes are most essential in Cuba, to preserve the peace of the isl:und, as intelligence mut civilization are swom enemies to the ofd despotie rules. ligeoty and prejudice an crect no barrier that can resist the advanee of reform political, and only do wo find that obstimatey against, improvernent in the degenemate old Catholis monarchies, which time will eventually siveep away, to make room for more equitable and gencrous systems of government. The great tidal wave of kuowledge is resistless in its course.
"In intelligence and education, the Orooles are far anead of their forefathers of the land of garlic and castancts; and as the idens imbued in forcign education and travel get disseminated and take root amougst the lower class, a now order of things must inevitably telke place. It is for the moher country to foresee and forestall all desired innovations, and Cuba will remain

Spanish; otherwise the Spanish crown will lose its brightest jowel.
"Lope\% failed, it is true, but his very failure, and the eelat given to his net, by the undisguised alarm of the fovemment, have raised a spirit of incuiry to which the mewer is obvions-a spirit, farmable to improvement and change. Still, as peace alone cau be a boon to a country situated as is Cnbn, no rightly jurging reformer can desire any but a peaceful change. I will, most probally, slake hauds with you before another moon passes over. Until then, arlien!"

On Sunday, March 4, we lid adiou to Cuba, under great obligations for returning health, and, with an hundred others, we placed ourselves under the stars and stripes that float from the De Soto. Having passed the Moro, we were soon on our why over the ocean to the great river, where were deposited the romains of the diseoverer whoso name is aftachod to our excollent steamer. A swell, soon after leaving port, caused a rolling of the billows, and many of our company, instead of a fine dinner, lad to take to their pillows, and rest quietly, with only a dry roll.

The moning, however, roused all hands to enjoy a delightful temperature on dech, and a smooth sen, and the breakfast table was well attended. A pleasant day was passed, in watching the sails of tho tiny Portuguese men-ot-war, as they drifted by us in almost a legiment, and the gambols of a sehool of perpoises, which were fishing in our vieinity. In forty-eight hours, we entered the muldy waters of the Bississippi, ated soon passed its natrow bat The river was alive with vessels of various chasses, in tow of steamers, and its low, sodgy banks, destitute of vegetation and foliage, presented a solemn comiast to the beat tiful werlure and ornamental grander of scenery of the "over faithful isle."

As we progressed upwards, we soon came in sight of nomerous sugnr cstates, whose neatness of culture, regularity and order of arrangement of the several buithings and dwellings of the owuers, presented pietares of practical knowledge aud business habits, far exceeding anything of the kind in Caba. By a brilliant fall moon, in a cloudless sky, the gallant De Soto bore us proudly and swiftly to the great commercial emporium of the Sonth-west, whero we arrived too
late to receive the custom-house officials. Crowds of vossels wero constantly passing, outward bound, laden with the "staple of the world," of which, it is sait, Now Orleans alone ships $2,000,000$ bales this year. The crop now is estimated as exceeding $4,000,000$ bales.

## CIIAPTER XVI.

> "___ Oft before my siglat arise Your sky-like seas and sea-tike shine."

In comection with our visit to Cuba, as we were provented visiting Nassan, we supply our failure to do so with the following very interesting and graphic lettor from a valued friend:

$$
\text { La Grander Antiti,h, } A_{\text {puil }} \text { 30, } 1860 .
$$

Mr Dear X: Rendered almost inconsolable by the absence of your excellent socicty, and our health learing by no moans improved under the course of fast living we had been subjected to in the 'La Siempre ficl' city of ITavana, we determined to take a trij to Nassan, New Providence, aud enjoy a few weeks' quiet rustication among the 'Conchs.' Accordingly, on the ultimo, we took leave of their Excellencies the Govemor General and his beantiful Countess, and bidding adieu to the frowning towers of the 'Moro,' found ourselves once more at sea, with a
fiesh breeze, skimming gayly along in the direction of the Babmas. As island after island presented themedves to our view, we were filled with admiration at their gem-like aporames, covered with a never-fading verdure peculiar to the Tropics and surrounded by the most phaeid of seas, thoy looked more like 'floating gardens' than anght else I can compare them to; indeed, it required but a very littlo streteh of imagination to suppose that they were expressly designed as a charming retreat for the grodless Venas hersolf. We were nover fired gazing at them, and conld not but ficture in one minds what emotious of delight their discovery must have produced in the hearts of the illustrions Genoese and his intrepid crow.
Disembaking at 'San Salvador,' we trod the classic beach of 'Columbus Bay.' A day or two later, we songht refuge from a squall at Earbor Island, and, after enjoying the hospitality of a noble old planter at Efeuthera, the prow of our trim little yacht was tumed towards the Capital of New Providence. Delighted as we had been with our cruise among those interesting islands, the beauty of which I lack words to describe, we
were still more chamed with the appearance Nassat presented from the sea, as we appronched the shore. It wated a lithle over one how for sum-set; it lind been jaminer, hat the somall had passed off, leaving in the westem shy a fow dark clouds, throngin which the sun's nuys liad sucecssfully strurgled, to light up the town and country with shades and tints, the most briliiant we had ever beheld.

As we drew nearer, we perceived that Nassan was bilt npon the side of a hill, rising several hundred feet above the level of the sea, to which it fronts. 'the pilot, an active and apparently very intelligent colored man, took charge of us outside the bar: and shortly afterwards safely anchored us opposite a large, substantial imon buiding, which ho infomed us was the baracks. I must here premise that we strictly preserved on incognito, by representing ourselves to be domneast Yankes in eatreh of freight. After receiving the oflicial visits of the remarkably poliie Marbor Master, aud no less courteous Tealth Officer, who, a la Espanol, placed himself, or rather his services, at our 'disposicion,' we prepared to go on shore.

We liad been partionlarly struck during our eruse, with the extraorlinarily trathent state of the water arotord these islenstr; as we moved up the habloor of Nassath, we distinctly saw beautiful colored fishes playing at lide and seek anong mimic forests of eoma, soveral fathans below the surface. A rakish-looking lorig, which we afterwards leant was picked up on the coast of Cuba, whence she hat been abancloned, having previously landed five humdred slaves, was laying at anchor in the streath.

We were put on shore at the Government Wharf, and having stopped a moment to admire 'cn passant' the plain but commodious public buildings, we proceeded to tho 'Royal Victoria Motel,' where an excellent eupper was soon got ready for us. Being somewhat fatigued, we retired early to our rooms, which were unusually large and airy, comfortably furnished, and, to our intense satisfaction, instead of a wretehed Spanish 'catre,' which the poor C. had fonnd so hard to get accustomed to at Havana, wo onjoyed the luxury of a elean, wholesome, four-foot English bedstead, witl mattress, \&c., all complete.

You must know that the Royal Victoria Wotel is under the inmediate patronage of his Excelleney Govemor Baley, who takes a great deal of interest in its welfare. The astute Govornor, whose long experience in colonial affiris makes lim peculiarly well fitted for the position ho holds, on his arrival at Nassan, saw with dismay that, unless something was tone to check the retrogressive condition of the town, it wond very soon go to the dogs. Hitherto, with the exception of a fow phanters and morehants, the Balamians generally had subsisted by the misfortmes of others; i. e., by wreeking.

Now, Govertor Bailey saw at a glance that Nassan empoyed adrantages of climate and geographical position which, with a little managoment, might make it as colehrated as Madeira for invalids, and as popular as Nowport and Saratoga for plensme-seckers in search of a splendid climate during the winter. His first step was to make the island comfortable. Accordingly, he never ceased in his exertions ontil he succceded in having a first-class iron screw steamer, the 'Jamak,' (commanded by one of the finest sailors that creer trod the deck
of a ship, placed on the route between New Tork and Nassan; and as visitors began to flock in great mumbers to the latter place, lie determined that suitathle accommodation should be provided for them. At his lixcellency's suggestion, one of tho largest and best situated loouses in Nassan wat purchasel, at the public expense, and entristerl to the management of a competent person from the United States. Every attention was paid to the comfort of the guests, most of whom, like General and Mrs. Pierce, came with the intention of staying only a short time, but were so woll pleasel, and derived to much bencfit from the climate, they resolved to remain. there all wiuter. During our stay, the fure was exceedingly good. We got plenty of fresh fish, poultry, cgge, mutton and beef, every rariety of fruit and vegetables, and turtle soup every day!

Governor Bailey's idens in regard to drawing visitors to the island (New Providence) having turned out so well, and there being every prospect of a mucl larger number coming next winter, his Excellency was prompted to apply for a considerable sum of money to enlarge the building, so as to accommodate a hundred ardi-
tional grests. But, as this was to be dome at the publie expense, of eourse it requived the sametion of the Colonial Parliament.

The disenssion on this momentous gucstion came off soon aftor our arival, and gladly accepting tise polite invitation of a friend, we hastenol ho the 'Salle des Dobuts.' On' curiosity was anply repaid, bur we never witnersed a more ammsing secoc. The oratory, with very few exceptions, was extremely indifferent. The natives were casily ristinguished by a sort of patois, peculiar to the British West India Islands-not momusical to the ear, but strangely absurd to one not acenstomed to it. Everybody spoke at once, and upon sulyects cntirely irmevant of that in regard to which they had been convened together. Indeod, they appeared to think the oceasion suitable for setting forth their individual grievances, rather than attending to the pulbic welfare; and there was no end of skimmishing. One rather tall, gentlemanly-looking old man, told one honoroble member that 'he was at liberty to say what he pleased; he should take no notice of his remarks, as lee had already more than once shown the white

Father!' No reply was made to this by the dark-complexinsed persomaty to whom the above sthugine mboration was adresede hate it, evidenty duicted himblin fle rest of the evening.

Wo wew lecoming very fired of the eveninges proceedings, when, to om delight, an homotathe mentrel-eridenty, from his tonguo,
 begged 'their worships' fo have the goodness to inform him when they intended to go into discussion about the 'JVorel Emargement Tible' as, for his part, he whes sich: and thed of listening to so muth twatdle! 'lhis brombide had the efleet of bringing the members to a seuse of lieer daty; and I am happy to say we left them voting in favor of the bill.

The houses of Nassan, with the exception, unfortmatoly, of a fow in the front streets, are kept scrupulonsly noat and cleain, and scem to be well adipped to the exigencies of the elinate. They have fine broad galleries, enclosed with morable Venctian blinds, which serve as a sort of crening promenado for the occupants. Many of them have nicely enlivated plots of ground attached to them, and ss trees abound in every
yartl, the town, from a short distunce, hans the appearace of being embowerel in a huge garden. The stroets might scre as a model for the New York City Comeil, so free are they from dirt and dust.

The islant is gatrisoned by black troops, who look remakably well in their Zoume unifom. These men are commanted by white officers, whose gentlemanly and courteons bearing makes their presence in society desirable.

With regard to the climate, it is umdoubtedly the most salubrious in the world. Fellow fever is unknown here; a delieious sen breese prevails constantly, and the thermometer, in winter, averages about $75^{\circ}$.

People attain a great age in these islands; indeed, they appear nover to grow ohl. Upon renewing my acquaintance wifh the excellent and highly cateoned Chief Justice, the Ifon. Mr. Lees, who has presided over the tribmals of the Bahamas for upwards of thirty years, I was delighted to find that he looked as hale and hearty as he rid when $I$ mot him and his family, years ago, at the house of the Spanish Ambassador, at Washington. The same also may be
sairl of the talented Attomey General, who, with his olabming lady and interesting family, looked as frech as they did the day I had the pleasure of dining with them in lomdon, during the sharp winter of 1850 ; and at for that elegant, aceomphished and handwome lady, the 3 Bm . Mre. John P--_-., why, she positivety looks as young and sprightly as she did twenty ycars ago, at - - - , in Lecentershire; but in regatit to her they do say that she discovered the secret of that wonderful clixir, 'Thilsam,' presented to the Countess Dulbary, to retard the ravages of age. However, dear X, should any of your friends go to Nassau next winter, and require medical assistance, they will find several enincut physicians there. The only names I remember at this moment are those of Drs. Chipman and Black.

Count Roval has gone to spend a few weeks in the interior of Ouba with his friend, tho Marquis of V., and I proposo dejarting for Hance very soon. Tha amigo,
***

## OLINPTRE XVH.

" $\lambda$ physicine should consider his obligations to his profession and society undiselinged, who has not attrmpest to lessen the number of incurathe diseases. This is my amology for athempting to make cossumbrow the oljeet of a medieat jaguiry."

> Dr. P. Rusil,

The fearful increase of phthonary disense in the United States during the last ten years makes it extremely importunt that all prophylactic and therapeutic mems for relief slould be carefully considered and impressively urged. There was a time when it was considered neecssarily fatal, but farther knowledge of the physiology of the vital functions and pathology of what are called specific diseases, give the assurance that in its incipiency cousumption may be checked and removed, even with horeditary tendency. Why the latter should exist we know not-why special defects of constitution should be communicated to offspring, inviting particular disense or promoting its attacks, we know notwhy one individual should be prone to have a
particular organ affected and not another, our sciene dows not enable us to molerstand. In medicine as in other buaches of knowledge, we may well say with the poot:

> "Folix, que polmil rerum enghescere cotisas."

Fuets we can apprecinte, and results lead as to conses of paction, physical and medicative, calculatert to adrance our knowlodge of therapentic inhturses, and to prevent or modify the ation of cames to us unknown. More eareful and diserminating olservation, assisted by the: mpid adrance of seience, has greatly ituroved on lanolculge of pathology, and immensely increasod our prewentive and ourative treatment.

Various have been and are the theorics in relation to tubereular disease of the lungs, and still more varied are the modes of proposed medication. It is not my purpose to consider more than the fact which wide exporience has settled, that the tubercular secretion in its incipiency may be checkerl, and its deposit in the lnugs removed, by means calculated to
invigorate the system and improve the vital forces.

My friend and preceptor, the vencable Professor Stmol Jackson, from microscopic examimation of an incipiont tubercle, has declacel that. it is an abortive or imperfectly deroloped cell which has lost its vitality-whether this be so, or the tuberenar deposit an exmation from impure or vitiater bloorl, the tratment recuired is the same. You must inerease vital powerstrengthen nervons force and improve matrition, so that healthy blood can be formed to be sent into the varions tissues to repair the watste which is esustantly going on in the loody.

The integrity of the vital fuuctions depends on the proper discharge of the duties of nutrition, and the health and habitual regularity of action of the power of assimilation. There is a constant waste going on in the various organs and tissucs by the absorption, exeretion and removal of organic cells that have done their duty, become effete, and whose jlace is supplied by new sell substance sent to repair the loss. In the process of digestion and assimilation, if
imperfect forms are thrown into the blood, they are not property vitalizert, and of couse they are not prepared for the part assigned them in the reproduction of tissume and structure. Whether these cells, which latve done their duty and died, are deposited and remain in the lungs from imbility to tre absorber for removal, or whether the original new cell formation is defective, is not matocial. There evidently is deficient vital power in tho system comectod with their presence, which must be removated.
The lomes phay an important part in the depuration of the haod of superftrous and exerementitions carbon, and in conveying oxyeco to that fluid, while in the chemistry of physiotogy there aro other aud very important, influences eflected. This action is going on incessantly from birth, and never ceases until death. It therefore is greatly important that the organs of imbinition should be sound. Changes in temperatnre as well as in the density of the air breathed affect the lungs. A rarified atmosphere expands them umpleasantly and dangerously, and a condensed air oppresses them.

Lavoisier and Seguin say that an ardult man 12
takes into his body, daily, $32 \frac{1}{2}$ oz. of oxygen. Aecording to this calculation, Jichig thinks four days and five homs will be requirel to convert the whole of the carbon of the bleod into carbonic acid for exhatation. The chemists tell ms that this anomit of oxygen is all thrown out ngain in carbonic acid and water. If this be so, and $32 \frac{7}{2}$ oz of oxygen exhaust the blood of carbon in four days and five hours, the anount, of nomishment to renew the cartion and kee wh, the supply must be enongh to reimburse 24 lbs . of blood in that time. Liebig estimates the necessity of an adult in ordinary cerercise at, 13.9 oz . of carbon daily. Su it appears that a change in the raity or density of the nir will affect the general average, and the healthful or disordered state of the lungs will influence the result. 'liness are matters surgestive of thought, as to puhmonary disease. At all seasons and in all localities, in health, we tako into the lungs the same volume of air-its density, however, varics. In warm climates we part with carbon more slowly than in cold, hence the waste of the body is slower in the former.

It is, however, not my purpose to present a
disquisition on physiology or chenistry, but simply to state a few propositions now commonly received, that may onable a general idea to bo formed by every mind ot the dief elements of treatment mequired to modify or remove enuses of pulmonary discase.

Microscopie amatomy is contributing largely to the adrancoment of $\mathrm{p}^{\text {hy }}$ ysiology and pathology, and chemistry also derives most essential aid from its investigations. A great stride is making in developing the uses and functions and modes of action of vital organs, and the progress of arative influenees must follow ingrovement in such luowledge. But my purpose was to state, that while a proper relation must exist between the nervons and vascular systems to keep the organism in regular healthful action, the basis of all vital power in the system is in the nutritive organs--of course incheting the assistanco the hood has in perfecting its constituent globules from the action of the lungs. Whether or not nervolus power be a secretion from the blood, or a mode of electric action, resulting from the union of two kinds of matter with moisture, is of no consequence in my present effort. Upon
the simple proposition here net forth, I am desivons of establishing a reasomable argument for practical purposes.

In the role of the hmman conomy, the nervous power is essentat to proper digestion, ats tho experiments of Broughton and others show, while its reproduction is equally dependent on good digestion. While chenical forces aro incessantly acting within the borly as without, thit, action is modifed by what wo all murlerstand is a vis witce. Of the mature of this, wo are ignorant, of its offects, wo we cognizant.
"Cansa latet, ris est notissiman"
As we see an intimate connection between nervous foree and digestion, ench so intimately affected hy the ofler as for us mot to be able to decide certainly which is the primum mobile, so we have digestion essentially comected with the integrity of tho functions of the lungs, as we the latter influenced by the proper discharge of cluty of the assimilative organs. Whe phenomena of life are alsorption of nutrition and absorption of air-whe oxygen of the aixand upon these repend the support of the
minal organzation. The influence of food and the inflacnce of tho atmosphere keep up heath, and the relation between the two processes is natural and cssential the henthiful existence. On the olher hank, all diseceses mety be satid to tepenct on some intemal and imitating impurity, whether it proced primarily from the external worle, as in infection, malaria, cating improper food, \&c., of whether it be trom a hicklen viee of assimitation or cxeretion witlin the body and begond the reach of our ditenosis.

In the beatment of disoase, the all-infontant prinis are to get rid of and preveni ito remeenmulation of the morbid olements, (no matter how little we know of their minute mature, we do know their effects, and we often succeed in finding and opening channels for their happy climination, at tho same time that the vital powers generally are supported by the remeties adipted to counterade the sure tondeney to prostration.

I will not go into the investigation of the theorics of consumption as to whether the defective matrition causes it, inducing bad blood, or whether the want of proper pulmonary action
in not separating from the blood vitiated matter keeps in the system the injurions, if not the poisonous, influmee of dead exeretel materialthe latier passing into the tissnes which need vital reinforcoment. It is sufficiont for my purpose int has glancing at the relations of the vital organs, baroly to allude to existing conditions in orler to bring to the mind the reecssity for watching their action in relation to health.
The firect sedative influence of cold diminishes the action of the hangs, anch, exerted over their large surfice, enfeebles their vital powerthis impedes their proper duty of oxyentation of the blood, which then, in cireulating through the digestive organs, does not present the proper fluid for gastric secretion. So when the digestion is defective, the action of the lungs is influeneed and obstructed.
Pulmonary disease,--I am not speaking of pulmonary disorder, of cataurh or bronchial irritation, which is readily curable by carepulnonay disease, with habercular development or consumption, is not always recognizable in its incipiency, but when you find wasting of the body, with paleness indicative of deficiency of
red globules in the blood, with cough, quick breatling and guick pulse, you canot go far wrong in taking up the treatment of the ease as fir incijpent consmption. I make no referenco to the stethoscopic somuls, recognizatbe by the experienced ear of the physicim, as the object of this little volume is to draw the attention of persons, not medical, to the necessity of careful watelfulness of themselves. A great diffenty exists in this disease in diseovering it eady, as a special chanateteristio symptom is a delusivo idea that there is nothing or very little the matter. Many a catse of consumphion progreseses even to the end, by a steady and regulat progress, where the patient cannot perceive that he is in the certain path to the grave. IIe thinks he will soon be well, and lacks only strength which is so gradually parted with that he ermot perecive it.

Experience has shown that it is almost only in its incipiency that consumption can be cured-it is therefore important to recognizo its presence early and mudertake its cure without delay. In phthisis there is diminisled vitality, and increased irxitability and tendency to inflammation
in the intimate polmonary structure-whether the latter is from the prescrice of dead tubercular matier or not, is not important--it is a fact, and we are called mon to soothe irritation whilo we brace up the general strength and promote absorption. Whis can only be done by attention to place the pationt in an air less stimulating to the langs by the amount of oxygen--Jess trying to the lungs and skin by a dimiuishod and not, variable tempenature, and where, from diminished waste, loss food is required for the support of the systens, and the important tonic effeets of exercise may be oltained without risk and without fatigne.
Experience shows that many, who in carly life have exhilited symptoms of the presence of tubereles, have hand their health improved and confirmed by a change from sedentary cmployment to active life in the open ar-and dying of other diseases, post mortem examinations have exposed the marks in the lumgs of the former existence of fubercles. It fs not wicommon in familice with hereditary predisposition to such discasc, to observe cases of robust and perfect
hoalth, even to adranced yours, in those whose oceupation is in out-door business, with regular exereise in all weathers, while others confined to employments preventing the full enjoyment of air and oxercise, waste away and dic at early ages. Exposure to fresh nir is cosential to recovery in discase of the lungs, so that every iuspiration slad present to the diseased organ the vivifying influcnco of the pare elenent. What Miss lilorence Nightingule enjoins as the very first canon of mursing, is the rule for enfecbled and dismsed hmes: To kecp, the air the patient brenthes as puere as the coternal wir, without - chilling him. In acuto cases requiring confinement this may bo done for a short time by the strietest, caro and watehfulness, but as a rule indoor artificial temperature does not realize what the pue matural air of the external world has the duty to cflect. It is impossible to regulate the tomperature of at roon and preserve the proper density of the air free from adventitions impurities from borlies aromect. A porson with diseased lungs should bo only where the temperature of the smromudiug atmosphere will allow him to take exercise in it, and enjoy its
constant fresluness. This is an important axiom as a prophylactic in threatened casos, or :a curntive when disease is present.
It is a great, mistake to shat up in the house weak and delicate subjects from the four of taking colt-lot them avoid sudden and serions changes of temperature, but with proper clothing remain in the fresh air as much as possible, and take exerciso regulaty, and, if possible, incidentally in business, and not as exorcise. Pleasurable ocenpation in mopleration, with incidental exerciso in the fresh air, does more good in affections of the lungs, and in chronic discase generally, than the anteria medica. I would not undervalue the importance of cortain drugs in the assistance they afford, which is often essential, but, as a general obscrvation, I woudd remark, that in this disease quantitios of medicincs and mixtures of all kinds aro baken into the system to a most injurions cxtent. Judging from the notices of nostrums filling the pmblic prints, one would suppose that there are hundreds of remedies for each diserse. It is worth while remombering what the celebratel Dr. Radcliffe said: that when he commenced practice he had
twenty remedies for every disease, bat he had not long practiced, beforo he found there were twenty disenses for which he hat no remedy.
I lave strong laitla in modicine, butt lave, in this disease especially, stronger fath in the vis medicatrix nature, which often has to struggle agninst the remedies admanistered, as well as against the discasc. Meclical science is advancing in power, but the facilities of procuring diplomas are so great that a crowd of monqualified men is ammilly admitted to the medieal ranks, who impete and projudice the true progress of correct principles. In no cases is this more apparent than in diseaso af the lungs, where the vital primeiple is constintly broken down hy injudicious depletion, by inhalations, \&c.; symptoms, and not the disense, being prescribed for. We have demuleents to sonthe, and opiates to romove tronlilesome symptoms, but the chre is in the proper restoration of vital power to the nervous system, strength to the lungs and snbstance to the organic tissues; and this is to be done by improving the nutrition, iucreasing the assmilative power, making good rich blood and keeping it vitalized, which
can only bo done by proper food, plenty of air, and moderate, and in some cases, hard exercise.

The netion of atir, on tho blood circulating in the lunge, as aheaty stated, furnishes oxygen to combine with carbon, the chicf depuration regtixed, which causes waste, but during the process of actual combustion which hore goes on, the heat of the body is generatech. 'Jhat heat is generated in tho passage of dnitd into solid matter is no doubt truc, but the ehicef suurce of the loent of the boty is in the limes, where oxygen is combined with earbon. In wambmoorled animals the process is griek, in cold-blooded animals it is slower, but a fat, liberuating animal becomes poor by spring from this very combustion. A fat hog, shut up without food, will oxist for several weeks, from its living on its fat, which frumishes the lungs with the carbon that the nsinal amount of oxygen respired reguires, the wasto going on withont, any increment of mutrition. This is the case with consumptives-the action of the lungs exlarusts the carbon of the blood, while the nutritive function does not supply an amount,
of mutrition necessary to overcome the waste throumh that sonres. In this estimato no notice is taken of the amomat of loss to the system of vital power by depelion, in hess of bloor, poor rliet, and relaxing remedies.

It would recuire a volume to treat this subject fully. I can only wive the general iden, whict I desire to inpress on persons in weak healthspare and momish the vital fleicl-there is no such thing as gonoral inflammation--you can have local inflanmation, with zeneral imitability, but you cannot have general infammation, Depdemon of fine ermeral system to relieve such a supprosed state, increases general irritability and actual debility, and local inflammation, trated loy general depletion, costs too much in the expencliture of vital power, so much needed for the support of the system. General vital porror is realed for overcoming local disease, whether inflamatary or only passively congestive, and notiong shows this so forcibly as where local aflections arise in typhoid fever. Were you have local congestions and inflanmations in a sinking state of the system, where
general vital power is necessary to overcome such conditions, which are angravated by any depletion,

The important ides I would impress is, thati good digestion and frest air affording the pabulum of vital refreslment, are the essential means to be looked to for improvement of the general hoalth in consumption, as the only liope of correcting and removing local disease.

## CILAPMER XVIJI.

"Air observation of the circumstances which precede the disense, of its so called canses, elearly indientes imperfect digestion and nssimilation an its true origitr."-Dr. Dennert.

The olject of the previous chapter has been to endeavor to inpress mpon the reader, that an imperfect digestion, with want of the proper vivifying influence of fresh air upon the blood, is part and paree of tho condition of the system leading to and devoloping tuberenlar lisease of the lungs. To render digestion properly efficient, exereise in tho open air is essential, and the locality most serviceable to the patient is in such an atmosphere as is not variable, so that it may be taken regidarly. My object is more to direct attention to the genemal prinejple than to give any detail of symptoms or pathology, as to whetice the canse of consumption is in abortive cells, or a molecular oxudation from the blood, constituting tubercular matter.
While a student of medicine, in P.Philadelphia,

I was particularly stanck with a paper of the then eminent Dr. Jos. Parish, on phthisis, which suggestoul the neessity of constint exerciso in the open air, to inprove the gemeral healtle as tho essentiat means of cure.* Haring in my own family lost several brothers with the disoase, and suspecting in my own ease there might be a development of it, I was specially watehfne of the lessons of experience in relation to it amoug the patriarchs of the profession. For several years I was confinod to the Ohemical Taboratory of the eminent I)r. Thomas Cooper, in the South Carolina College, and was weakencd in lieattl (with constant pain in the chest, nceding erpping and blistering, by close attention to my duties, and had matidly to trivel during the summer to renovate. Finding upon every visit to a monntain region, breathing its fresh air and exercising in it, that $I$ was always improved, I detemined to change my profession, and, in practice of medicine, seek by constrint daily excreise, on horseback, the bracing in-

* Sce N. A. Mech and Surg. Journat, Yol. VIIF., 18n?, for this most watualide paper.
fuence of the fresh air on a constitation with a theat of breaking down. The result was a perfect restoration to health, ansl a continuance of it, with little to complain of, until last fall, a period of thirty years. The attack of hast winter is the only smiots one durine the whole of that period.

In my practice I have always followed tho suggentions of Dr. Parish, and my experience has accorded with his; believing that if $n$ remedy were found for consumption, it would be one to give strength and vital force to the system.

Dr. Bennett of Edinburs, in 1845, made a series of observations on post mortem cases which led hin to the conclusion, that the spontaneous arrestment of tuberele in its early stage accured in the proportion of from one-fourth to one-third of all the individuals who die after the age of lorly. IIe states the observations of Rogee and Boudet, made at the hospitals of the Salpetriere and Bicetre in Paris, as indicating the proportion amongst individuals above the age of seventy, as one-half and folur-fifths. 1:3

These facts, with experieneo of medical treatment, have indneed Dr. Bemett to state, that
"Phthisis, in its incipient stage, may be considered a very emrable disease; indeed so much so, that enre is, as we have seen, spontancousjy accomplished by mature, in a vast number of cases.
"So long as misery and poverty exist on the one hand, and dissipution and enervating laxaries on the other, so bonst will the causes be in operation which induce this termbe disease. But the means of ehecking and controlling it on at Iarge scale must be sought, not in drugs, but in hygicnic conditions, and tho difusion among medical men of that knowledge and skill requisite for detecting the existence of the disease in its early stages."

With the general proposition alluded to, the question then comes up as to the proper mode of renovating the nutritive and assimilative functions, which is to be done by proper food, assisted by fresh air. We can only give, in a gencral way, the convictions based upon facts, that

PROMER NOLIRISIDMENT. • 195
animal food chiclly is what is needed by the defective digestion in this discase-bily and albuminous maters, and particulary cod-liver oil, which is ensily igestod, are most innportant; but, milk, fat baeon, mattom, beef and ponltry are very good adso. Ripe fruits, sugar and proserves, if digested withont eruetation, are valuable th funisking carbon. Of vegetalbles, the patient must select what he knows agrees best with him; for traly,
"Try all the bometies of whis lertile globe,
Theme is not sucls salutary food
As suits with erery stomich."
Sone one has surgosted Paté de fois gras as a substitute for cod-liver oil to those who cannot stomach the latter-if they find it easily digestible it is woll suited to their case. The genem mole is to take the most nomrishing diet that the stomach will bear.

As to drinks there is but little to be said. It is fashionable now-a-days to drink whiskey, well or sick-and corn-whiskey is the popular liquid. Taken in moderation $j t$ assists digestion and furnishes carbon to the lungs, while it gives an agreeable and often necessary stimulias to the
circulation. Champagne, if pure, is the least injurious of the white wines, thongh Sintome, or the finer liocks, are admissible. Sherry and Port aro mach preseriber, and are valuable where a stronger wine is desired, but the light wincs aro usually preferable. Dach case, however, mast be julicionsly advised on this point.
In taking whiskey the quantity mnst be indicated by the feelings, but there is a little risk in an oconsional case, as to what moderation means. Dr. Cooper used to toll $a$ story of his lecturing Dr. P'riestley's gardener for drinking, when he said he only took liquor in morderation, and moderation couldn't liurt. "But what do you call moderation?" said the doctor. "Please your honor, sir, only a quart a day!"

Volumes have been writen concerning clinate, and numerous references might bo given, but as to exercise all agree. Sir Jolm Pringle always fomd that in fixed camps thero was more sickness from inactivity than from fatiguc, and this is the generally received observation. But in no discase more than in consumption is this neederl.

In relation to climate the most important con-
sideration is to find one that is temperate and equable, such as will allow the patient to be always in the fiesh air for exereise. The late eminent, Dr. Samuel George Morton, in his volurso on pubbonary consumption, collects a number of obscrvations as to the proper winter residence for consumptives. After quoting valrious writers, he says:
"It is probable, after all, that the West India islants are the most suitable resort for the consumptire, although sufficiont observutions have not yet been made to allow of a fair comparison."

He mentions of Jamaica:
"The mean ammal temperature in the shade is, in the lowlands, between 75 and $85^{\circ}$, and in the mowntains between 60 and $95^{\circ}$. Perhaps no part of the work presents a more equable temperature; which is attributed to the sea-breeze during the day, and the land-breeze at night."

## Dr. Morton says:

"Experience has amply proved, tlat a mixture of sea and land air, such as exists on all maritime
situations, is unfavorable to delicate lungs; and especially where there is phthisis, or cyen a predisposition to it. This rule appears to be of nearly equal application in all combtries; and the fact is probably, in a great mensure, owing to the sudden and extreme changes in the atmosphere in such situations: for it has been olserved, that soceral sea-bathing places in the south of Bngland, which are protected from the north and cast winds, are congenial to puhmonary invalids; white other places but a short distance off, and which are exposed to the winds in question, exert a decidedly noxious influence. The latter remark applies to nearly all the localities on our coast with which I am acquainted; indeed, north of Florida, I am not aware of a solitary exception. Even those consumptives who visit the bathing places of Now fersey in the summer season, are obvionsly injured ly it."

Even Florida is not free fiom changes-the weather there being sometimes delightur, but often the reverse.
In the foregoing pages I have cndeavored to exhibit to the reader my views of the importancu
of change of air in pulmonary disease, or when it is thereatened that change being to a temperate atmosphere which is erquble, and where the patient may avoid as much as possible the risk of "taking cold." Whether nerrous power and clectricity are the same is unsettled, but every one knows how harometrical the weak nervons system is-how a norther or an east wind depresses the strength and feelings. To all debilitated persons clanges of weather are most disagrecable and dangerous, and changes in the electricity of the air affect the body. "Taking cold" results from an alteration of nervous (clectric?) action, affecting uncomfortably and injuriously the vital functions, altering the distribution of nervols influence, and of course influencing the circulation. The great and important object in changing air is to get to a locality where the fluctuations are but trifling. In 1858, I spent hwo days in Philadelphia, in July, with tho themometer at $96^{\circ}$-next day I went to New York, and that night the thermoneter fell to $54^{\circ}$. I took cold, and had asthma fixed on me for six weeks.

My experience of the climate of Trinidat,
where I saw tro one with a cold, hut observed great inprovement in persons affected with pulmonary symptoms, has induced me to throw thefore the pulbic iny expericnce and views. I trust they may assist some sufferers.
The rathe of that climate is chiefly in its cquability and temperate elaracter-and in a fropical region the waste of the system from the combustion of the hugs being small, less effort is required for the mutrition of weak organs, which will have a better cliance of recovery than where full duty is reguired of them.
Besides the disense I lave been oceupied with, I may allude to others which call for special attention.

There is a prolific class of maladics resulting from the over exercise and abuse of what may be called the "goabead principle." It belongs to our country, and deserves a phace in our nosology. In the older combtries such incessant labor in pursuit of wealth, as is characteristic of our busiucss men, is monnown. There certain hours are devoted to business, and then they retire and have rest and recreation, but with our merelinits and other business men, and lawyers
and doctors, the wear and tear of body and mind are incessant. Every hour for yeurs is occupied, and the tension of the low is so constant that aften its fibres gradually acharate aud the elastiesity is Instroyed.
Plysicians are constantly applied to by persons with symptoms of heart and head discase, nenralgin and debility, which are but the results of over work and over exercise of mind and body. Affections of the heart are the most common, where the organ has undergone stondy and continuous effort for years to keep up the body cugaged in busiuess most exciting, and rogniring jnecssant labor and occupation. Individuals expect to keep up this intense exertion until they acepure an indefinito fortunc, and are anxious for their medical atviser to phat them on a course that will either not interfere with husiness, or quickly enable them to return to it. They do not reflect that the strands of life are loosening, that the oxcitements they have been submitted to are liable to be followed by a natural and cortain depression, the end of continued exercise of vital power used up, instead of leing recuperated by the practice of moteration in atl things. How
common is it to see the best energy and most active intellect braking down by exlaustionresting a woek or a montl, or sometimes a season, and going back again to the depressing influences so certainly destructive of what vital foree is left. We are aceustomed to see these cases, and to meet daily with apoplexy and paralysis as results.
"How much of late years has paralysis increased," is a very common exclamation, and overy one who passes fifty begins to look for it, but will never realize that his incessant mental and bodily exertion is predisposing him to it all the time. This class of cases is steadily increasing, and needs a treatmont somewhat similar to that we have advised for consumption, with the difference that here rest and not lard exercise is most neecssary-laying aside busiucss, and trareling in a plensant climate with nothing to do but to sce and enjoy the beautios of nature and art, where excitement is very moderate, and only of such-a character as to create pleasurable emotions without depressing any vital function.

No one can travel in a comery of luximiant landscapes, where nature is exuberant of moun-
tain and valley and tree abd flower, without being agreably exhilamater. The clearness of the atmosphere is commmicater to heis ideas, the balmy air soothes and soltens the asperity of ill health, and solid acquiroment of rital power accumblating gently from pleasurable influences, repays him for any sacrifices of leaving lome. The dull and moping are disenthatled from their lethargy, and the spirit of ronovated lealth buoys up and restores the anxionsly desired nervons force, and puts now life into the previously enorvated system.

## CIIAPCTER XIX.

DIREGTIONS FOR TRAVELBAS.
The facilities for visiting Cuba are so great tlat opportmities oecur almost weekly. Regular stcamers leave New York and New Orleans every twenty lays, touching at IJavana. The ]ritish stemer Kamath leaves New York aud Havana once a month, stopping for a fow hours at Nassan, N. P., the seat of government of the Balamas, where are a.good hotel and a pleasant, mild and henlthful elimate, where our own language is spoken, and many inducements exist for a visit from the invalid. The passage from Now York to IIarana is $\$ 60$; from Nassan to Mavana, $\$ 15$; and from Now Orleans to Lavana, $\$ 30$. The steamers we all fine, and the fare excellent, with kind and special atlention from the gentlemanly commanders and officcrs.

A regular steamer, the veteran Isabel, leaves Charleston, S. C., on the 4th and 19th of each
month, and makes her trip in three days, and sometimes less. The passage money is $\$ 10$. This fine sleamer, wher tho command of the experienced and watcliful Capt. Rollins, is so punctual in her arrival at Itaram, that if she does not enter the hatrbor within nu hour of her usual time, much anxicty is exlibited lest a broken wheel or shadt, or some such casmalty detains her.
Before you leave the United States it is necessary to have a passport, which you may procure from the Sccretary of State's office at Washington, if convenient, countersigned by a Spanish Consul, but one from a Spasish Consul in amy American port is sufficient. If you have several of your family intending to keep together, you may include them in one passport, for which you pay two dollars, whether for one or more.
There is a hw against colorod servauts landing on the island, but if you get the Spanish Consul to put your servant in the passport, you can pass lime withont being stopped; if he is not included, you must get an order from the Captain General, through your Consul stating the circmmstances of the scrvant being a nurse, de.

Passengers shonld remember the change of cli-
mate, requiring a chatge of elothing, and make their preparations accombingly, pacing in their carpet-bags such changes as they require, as the trunks are usually sent below, and untel difficulty exists in retting to them. The fact that the rariation of elimate is so little in a tropieal region, where summer clothinge is constantily worn, makes it important that proper provision should be made. White linen is commonly worn by residents, and is well suited to the ordinary temperature, but is rather expensive, as washing costs not less ban $\$ 1.60$ per dozen for any articles.

Invalids will do well to take with them a little basket, containing a bottle of fine brandy or whiskey for sickuess, with a phial of landanum and one of paregoric, one of hartshorn, a bottlo of calcined magnesia and ono of mostard. A spoon and sifver cup or tumbler will bo of great use in traveling, botlo at, sea and on lancl, satwing trouble and time. A small tim apparatus for heating water to make tea or coftee, with a bottle of alcohol and a pound or two of the best tea are also important. The durg stores, however, in Ouba are very good and well supplied, and alco-
the officer, and often "a fellow feeling nakes us wondrons kind." A polite and frank expression that the contents of the truak are only for private use, will often be met by an equally polite reply in the liow of a elatk mark on the tronk without any examination.
Haviug passed your baggage, and having roceived from the ehicf officer your perinit to remain three months on the island, or thirty days out of llavana* for $\$ 2.00$, your agent provides you with a volante or carriaro for tho hotel, and your preliminary difficulties are over.

The principal hotels are Marlame Admy's, near the Ahameda, which secms to be always full; Mrs. Braafer's Motel Cubano, 27 Teniente Rey; LurGranis's, opposite the Campo Militar, near the Tcatro de Tacon; Mrs. Robinns' Queen's Hotel; Mrs. Denwzencre, Toniente Rey; Bulena Vista House, oalle de Cuba, mud we ought to mention

* When cour passport runs ont yout have it renewed by any eaplain of a partido for fifteen days, and pay $2 b$ eents. If you are traveling towards Iravane, you are setiom asked to show it. Ordinarity, when you enter a hotel, your host asks for it, and keeps it until you leave. If you propose to remain more than three montha, you gel a domiciliary passport.
"Tue Born World Hotris," Catle San Ignacio. There are also others, which can be found on enquiry. There is a good hotel kept on the Cerro, ly Wooleur, which is guict and retired, and very airy.

The IIote\% To Groud, outside the walls, has a restaurant, where you call for what you want, and have your meals at any how. Tho sloeping apartments are not as comfortable as they might be, but the table is perhaps less exceptionable than that any where clse. Domingo, the fille do chambre, is very polite, and the waiters attentive.
The prices vary from $\$ 4.25$ per day to $\$ 2.50$, and board may be had at oven less, but $\$ 3.00$ to $\$ 3.50$ is mostly the clarge in good hotcls; at Trinidad, at the Grande Antilla, you pay $\$ 3.00$; at Matanzas, at $F n s o r ' s, \$ 3.50$; and at Cardenas, at Mris. Woodbury's, $\$ 3.50$.

In such a wirm climato, necessity requires provision for only a day, and rents are very high. Mrs. Almy pays $\$ 600$ per month, and Mrs. Brower $\$ 100$, and this all the year round.
$\Lambda$ difliculty exists in procuring small change, which makes it important for travelers to carry
with them a good supply to snve them money and tronble. Tifty or an bunderl dollars in dimes and half dimes can readily be usect, and Ametican gutaters and halves pass only for fwenty and forty cents. The eurency of the country is in onats, or ounces, (doubloons,) valued, the Spanish, at $\$ 1 \%$, and the Mexican at $\$ 16 ; \frac{3}{2}$ onzas, $\$ 8.50$; $\ddagger$ onzas, $\$ 4.25$; $\frac{1}{8}$ onzas, \$2. $12 \frac{7}{3}$; pesses, Spanish dollurs; pesetus, 20 cents; reales fuertes, our old Spanish $12 \frac{1}{\text { cent pieces; }}$ reutes sevillanos, or sincillas, the Spanish 10 cent or our dimes; medios, the old Spanish 6 cent pioces, or our half dime.
The old Spanish quarter, if the columns are prominent, pass for 25 cents, but if effaced, only bring 20 ements. As the charge in a volante for riding to uny part of the city of Hitvana is a peseta, two dimes will pay it, while an American quartor will only bo taken as a peseta. As visitors part with much of their change to the caleseros, it is worthe while to have tho purse well filled with dimes. Americim gold dollars pass as such in LLavana, but beyond the walls, and in the interior towns, they are at a discount.

Visitors who intend to remain some time in the iskul shomet be well suppliet with Spanish gold, but should exchage it for Anerican, if any be orn hat, before learing. The harge amont of Amercan dimess and half dimes in circulation in Cuba is rery striking.

As there are persons connectord with the hotels and railroads who spoak Jnglish, there is little difliculty in getting along, and on excursions you can usually procure an interpeter firon the hotel if no che of your party spoaks Spanish. The mailroads are woll managed, and receipts for haggage given and the mombers earefulty entered on a register, so yon may feel at ease about your trunks white in their care. Whene you get possession of them keep your eyes on them until you adiver them to your hotel agent or the Papress. This is very necessary, of they way disappear.

To visit the punlic institations no permit is required, excopt to the Moro, the Cabanos, and the Jresidio-for theso youl must apply to the American Consul, who procures the desiced pass. You should apply the day before, so as to give
time-the rule of the country is never to be in at hurry. "No come pricsa."

A common proverb in Spanish is
"El quesa apresura se muere, el fuc no tam biens"
"Ite who hurries himself will tive--he who thes not, all the suuc."

In Thavana, the street volantes charge a peseta for a ride to any part of the city, whether for one or two persons-or 80 cents to $\$ 1$ per hour, if you make a bargain before hand, and this you should always do, particulady if you go beyoud the walls, or the calescro will Heece you. The better plan, if you expect to be absent some time, where you are not likely to meet volantes for return, is to go to the stalble and make your bargain with the Alquilador, you may then depend on the arrangement. Usually they charge a quarter ounce, $\$ 4.25$, for the afternoon or evening, one hour or five-but yon may make your own agreement. If you make no bargain, yon may expect to be overclarged, as in Northern communities. We know a case of a friend who took a volante in the morning
without any agrocment, anul he kept it most of the day-he wats charged an ounce, $\$ 17$.
In purchasing at the stores, they usually ask you a larger price than what they expect to take, you should theefore bo aware of this and offer less, and adhere to your offer. One-half is frequently takeu of the asking price. We purchased some lithograpls of ingenios and views of the island at $\$ 1$ each, and upon mentioning it to a friend, found that she had bought the sume from the same place at 20 cents each.

Visitors t.o Cuba should provide themselves with something extra in their finaucial calculations (which shonld be very liberal), for extras will be found a heavy item even with the utmost watchfinhess. As everything is very dear in Cuba, a well-filled purse is the greatest. necessity to the traveler. It is very pleasant to ride on the pacing ponies, which abound, but nowhere else is the cost of equestrian enjoyment greater.
There is one suggestion to the visitor of very great intercst, viz: to procure letters to planters, owners of estates in the combtry, or to resident citizens. There are exceptions, but letters from
business men to business men, merehants, hankers, see, are of little valme. Tetters to private gentlemen or planters will give yon a warm weleonc, and enable you to see the country and emgoy its true lompitalitg, but Mr. Hogshead's letter to Mr. Nuseovado, withe a draft upon the latter, yon will find approciated for the premitur and not for your acequintrmee. We rielivered two such letters, and found they did'ut pay for the walk to the counting house, so we threw in dozen others into the erystal waters. If you have letters to planters you will find tho kindest treatmont and an hospitality that will put yon at ease. Still, with all the coldness of the merchant, you must have a letter to one to receive and forward your Jetters-this le will do becames it is a matter of Insiness.

[^0]:    "Sounds and sweet nira that give delight nad burt not."

[^1]:    "Groves whose rich trees wept odorous guins and balm,
    Others whose fruit, burnished with golden rind,
    Hung amiatble, Hesperian fables true,
    If true, here only, and of delicious taste."

[^2]:    "why" sach an whustal number of expeditions have lately been Gitted out for the coast. The eapture of thee ressels filled with slaves, within something less than six weeks, has produced the greatest excitement in flavana, where some of the most influential of the dealers have ventured to demand under what treaty and with what right have Amorican crusers been perwitted to take upon themselves the duties of a marine police in Spanish waters! libe number of slavea lately captared and taken to Key West by the United States war steamers "Molawk," "Grusader" and "Wyandote," amount to abont 1,800 , averaring 600 for ench vessel.

[^3]:    * Recently an immense fire in the valley of Trinidat has destroyed cane to the value of a raillion of clollars.

[^4]:    * The eoffe-tree requires to be protected, at least partially, from the sun; henee the planting of bmana and other trees in their midst.

[^5]:    * What, after all, if these are not the ashes of Columbus! There whs neithor inscription nor sign on the leaden chest or plate, by which the enclosed remaizs could be certainly identi-fied,-the account mentions none; this, lowerer, were beresy in Invana. -
